www.ifpartners.com

September 30, 2021

This brochure (“Brochure”) provides information about the qualifications and business practices of IFP Advisors, LLC, which operates under the business name of Independent Financial Partners (“IFP”).

If you have any questions about the contents of this Brochure, please contact us at 813-341-0960 or Compliance@ifpartners.com. The information in this Brochure has not been approved or verified by the United States Securities and Exchange Commission (the “SEC”) or by any state securities authority. Registration of an Investment Adviser does not imply any level of skill or training.

Additional information about Independent Financial Partners is available on the SEC’s website at www.adviserinfo.sec.gov. You can search this site by using a unique identifying number, known as a CRD number. The CRD number for Independent Financial Partners is 125112. The SEC’s website also provides information about any persons affiliated with IFP who are registered, known as Investment Advisor Representatives (“IARs”) and/or Access Persons of IFP.

ITEM 2. SUMMARY OF MATERIAL CHANGES

Independent Financial Partners (“IFP”) is required to provide this Brochure or a summary of material changes to you, our client, within 120 days of IFP's year-end.

- First, IFP is disclosing that it will start receiving \$5 per account opened at Pershing for Health Savings Accounts (“HSA”).
- Second, IFP is disclosing that it accepted a PPP loan, which was forgiven.
- Third, IFP has some Investment Adviser Representatives who leave IFP and who continue to collect fees from accounts they brought to IFP while they were with IFP, and such payments may be construed as either Solicitor fees or revenue sharing.

You and prospective clients can always receive the most current disclosure brochure for IFP at any time by contacting your investment advisor representative or contacting IFP Compliance at (813)-341-0960.

ITEM 4. ADVISORY BUSINESS

IFP Advisors, LLC, doing business as Independent Financial Partners (“IFP”), has been a Registered Investment Adviser (“RIA”) with the Securities and Exchange Commission (“SEC”) since 2008. IFP is wholly owned by IFP Group, LLC.

In general terms, IFP’s service models can be depicted as follows:

IFP conducts its investment advisory business through a network of independent Investment Adviser Representatives (“IARs”) who operate offices located throughout the United States. While we oversee your advice and asset management, we do not dictate the products, platforms, or services your IAR recommends to you within the scope of available options IFP makes available to your IAR. Most IARs will operate under their own business name(s) or Doing/Business/As (“DBA”) name(s). Such DBA names are registered companies or registered trades names in their respective States, but such entities are not registered to conduct investment advisory services themselves; investment advisory services are provided through IFP. The business name(s) and DBA name(s) used by the IARs are separate from and are not owned or controlled by IFP. The purpose of using a name other than IFP is for your IAR to create a brand that is specific to the IAR and/or office from which the IAR or group of IARs operate. Such IARs also offer and provide other services through their DBA name(s). However, as stated above, all investment advisory services conducted by IARs are provided through IFP.

IFP offers a variety of investment advisory platforms, custodians, and brokers, including our own affiliated broker-dealer, IFP Securities, LLC, doing business as Independent Financial Partners. Many of our IARs are also dually registered as Registered Representatives (“RRs”) and solicit, offer and sell securities through IFP Securities, an affiliated, introducing broker-dealer whose accounts are held at Pershing. Please refer to the Brokerage Practices section for additional information regarding our broker-dealer affiliate.

In addition, many of our IARs also act as insurance agents independent from our firm. To the extent your IAR provides fixed insurance products or services to you (other than fixed indexed annuities)¹, he or she does so outside of IFP’s supervision. Some of our IARs are also involved in other business activities, such as accounting, legal, tax, and other non-investment services, which are outside the scope of IFP’s services, and therefore IFP is not responsible for such non-investment services that may be offered by our IARs.

¹ Any insurance securities (variable annuities, variable insurance and other insurance products which are subject to a prospectus filed with the SEC), and any fixed indexes annuities fall within the scope of IFP’s supervision.

Some of our IARs are licensed as independent insurance agents through various insurance companies, they solicit, offer and sell fixed and/or property and casualty insurance products where they are duly registered to conduct business. Therefore, IARs can potentially be acting in all three capacities when soliciting, offering, buying, selling and exchanging investment products, investment advisory services and/or insurance products. For avoidance of doubt, those three capacities are as a securities broker (also known as a "RR"), an investment adviser (also known as an IAR), and an insurance broker (also known as an insurance agent). There is a conflict of interest when IARs solicit, offer and sell securities and insurance products for which you would pay a commission, while also soliciting, offering and selling investment advisory services and managing the assets in your accounts and charging a separate investment advisory fee. IFP addresses this conflict of interest by requiring the IAR to disclose to you at the time a brokerage account is opened through IFP Securities the nature of the transaction or relationship, his or her role as an IFP Securities RR, and any compensation including commissions that are paid by you and/or received by the IAR. Moreover, it is the general policy of IFP to refrain from charging a commission on accounts where the IAR is charging an investment advisory fee for the same period of time. In situations where clients want comprehensive financial planning², or ongoing advice covering securities originally sold in brokerage transactions, IFP's policy, absent a compelling rationale to the contrary, prohibits charging an investment advisory fee for assets sold in a brokerage transactions, unless (i) a period of time passes until the investment advisory fee that would have been charged exceeds the commission actually charged, *and* there is a sound basis to commence the investment advice/management of such assets at that time (ii) such products are not available on an advisory platform on an commission-free, advisory share class basis, are better for the client's investment objectives and in the client's best interest, are liquid and the client also seeks continuous and regular investment advice/management. Otherwise, such assets should be excluded from investment advisory billing.

You are under no obligation to (i) engage the services of any individual professional recommended by IFP, (ii) engage the services of any 3rd party investment adviser/manager recommended by IFP or (iii) accept the advice to buy, sell or exchange of any particular product and implementation decisions in situations where the IAR/IFP has non-discretionary authority over the account. You may vest discretionary for trading decisions with your IAR or retain such authority yourself. If you retain discretion over implementation decisions, you will be the one to accept or reject recommendation from IFP or its IAR. In situations where you have provided the IAR/IFP with discretionary investment management authority, you may revoke that authority at any time, but unless or until revoked, your IAR retains the authority to make trading decisions in your account with discussing them with you beforehand

It is your responsibility to promptly notify us if there is a change in your financial situation or investment objectives. You are not obligated to use IFP for securities transactions or individual insurance provider products.

GENERAL DESCRIPTION OF PRIMARY SERVICES OFFERED

IFP enables its IARs to utilize many different avenues to provide personalized investment advisory services to you. These services include financial planning and consulting services, referrals to third-party asset managers, investment advice/management by the IAR and investment advice/management by IFP personnel in the Home Office.

IFP's recommendations and services are provided based on your specific needs. Investment strategies and philosophies differ among IARs who are responsible for determining and implementing their own investment advice under the supervisory controls of IFP.

You and your IAR will discuss your financial goals, investment objectives, investment experience and time horizon, among other factors specific to your financial situation. You are given the ability to impose written restrictions on your accounts, including specific investment selections and sectors. When you impose these restrictions, IFP will make best efforts to honor those restrictions. For this reason, it is important you understand that IFP performs advisory and/or brokerage services including investment reporting for various clients, and that we give advice or take actions for clients other than

² This reference to comprehensive financial planning refers to plans that are priced based upon a % of assets under management, for which ongoing advisory/management services would be provided. On the contrary, comprehensive financial planning does not refer to a financial plan that is priced based upon a flat fee and for which there would not be ongoing advisory/management services covering the brokered securities in question. In other words, financial plans priced based upon a flat fee and for which there would not be continuous and regular advisory/management services could provide such limited advisory services that covers securities (sold by IFP Securities) without having to wait until a commissioned product sold by IFP Securities "ages" for a period of time such that the commission equates to the proposed advisory fee for the same time period, , or otherwise have to comply with considerations in point (ii) above concerning platform availability, etc.

you that differ from the advice given to you.

The following are brief descriptions of our primary services.

Additional descriptive information is provided under Fees and Compensation so that you and prospective clients can review the services and description of fees more thoroughly. Descriptions for some of our asset management services are provided in the respective program's Wrap Fee Disclosure Brochure.

FINANCIAL PLANNING SERVICES (PLANS AND CONSULTATIONS)

Some IFP IARs will provide financial planning services or platforms that focus on your specific needs and concerns. These services can be comprehensive in nature and focus on your overall financial situation, risk, goals, and objectives, or modular in nature, focusing on specific areas of concern that you have such as asset allocation, college planning, estate planning, etc.

Financial Planning consists of:

- Helping you determine and set your long-term financial goals, through investments, tax planning, asset allocation, risk management, retirement planning, estate planning and other areas. The role of a financial planner is to identify your investment and planning objectives and to assess and/or provide effective/optimal strategies to achieve your objectives.
- In this sense, we offer:
 - Comprehensive and segmented (modularized) financial plans and also through specific recommendations. Comprehensive planning services focus on a client's overall financial situation;
 - Modular planning services and consultations focused on specific areas of client concern, like retirement planning or education planning; and
 - Recommendations can be for asset allocation advice to specific accounts held away from an IAR (e.g., 401(k)).

Your IAR will collect a variety of information and documentation from you that is necessary to perform the requested services. Your IAR will gather the information in order to review your current financial condition, to assist you in determining your attitude toward risk, and to identify your financial goals, objectives and challenges. Financial data that is gathered and reviewed include, but is not necessarily limited to, statements and account data from banks, broker-dealers, and mutual funds, as well as tax returns and insurance policies.

Depending on the level and the scope of the financial planning engagement, your IAR will also review wills and trusts. Your IAR will rely on the information provided by you. Therefore, it is important the information you provide is complete and accurate. Neither IFP nor your IAR are responsible for verifying the information you provide. In addition, if authorized by you, your IAR will gather information or documentation from your other professionals and are expressly authorized to rely on that information provided. We urge you to work closely with your attorney, accountant, or other professionals regarding your financial and personal situation.

Your IAR will discuss his or her recommendations with you as well as steps to be taken in order to implement those recommendations. It is your responsibility to notify your IAR if there are changes in your financial situation or investment objectives. You should notify your IAR of changes so that they can work with you to determine if the changes will affect the advice previously provided. Together, with your IAR, you can determine if you wish to engage him or her to review, evaluate, and revise the previous recommendations provided.

Although financial planning services are provided with the intention that you will implement the recommendations, you are not obligated to do so. You retain discretion over implementing decisions relating to financial planning services and are free to accept or reject any recommendation from your IAR. You have the option to purchase investment products that are recommended through other brokers or agents that are not affiliated with IFP. To the extent you would like your IAR to implement transactions on your behalf, you will need to enter into a separate contract with your IAR for the appropriate service, including contracts to establish (i) investment advisory/management services involving discretionary

or non-discretionary continuous and regular account oversight and/or implementation services for an investment advisory fee (typically a % of assets in the account subject to advice or “under management”)³ or (ii) a brokerage account to be used to implement transactions in exchange for a commission-based compensation arrangement (without an investment advisory fee). With respect to the latter, a conflict will exist between the interests of IFP, your IAR and your interests because if you choose to implement the advice of your IAR through their separate capacity as a RR, your IAR will earn commissions in their capacity as a RR (or additional advisory fees financial planning engagement that result in entering into an ongoing investment advisory arrangement) in addition to the fees charged for financial planning services.

The fees for these types of services are negotiated between you and your IAR and depend on the nature of the financial planning services provided, the time and the complexity of your circumstances. All fees are agreed upon prior to entering into the Financial Planning Services Agreement signed by you.

Fee arrangements are documented on the Financial Planning Services Agreement (see Item 5 – Fees below for a specification of the ranges of fees⁴

These services do not involve actively managing your accounts. Depending on the specific planning service, if other than comprehensive financial planning, such plans may not consider all important financial issues of the client; clients and FP will agree of the scope of each financial plan.

INVESTMENT MANAGEMENT

ADVISOR MANAGED

In an Advisor Managed Account, sometimes known as "Rep as Portfolio Manager" ("RPM"), your IAR will be responsible for managing your account consistent with your defined objectives and risk tolerance and will assist you to develop a personalized asset allocation program and customized portfolio. IFP does not offer proprietary products. IFP's investment recommendations are not limited to any specific product or service offered through a broker/dealer or insurance company. Your portfolio holdings can include, but are not limited to, securities listed on the stock market exchanges, corporate and municipal bonds, mutual funds, Unit Investment Trusts ("UITs"), Variable Annuities ("VAs") and/or the sub-accounts within a VA, alternative products, including project-specified private placements, Real Estate Investment Trusts ("REITs"), Direct Participation Programs ("DPPs") or Business Development Companies ("BDCs"), United States government and government agency securities, certificates of deposit, warrants, and commercial paper. Depending upon the issuer and how it structures the product, some investment products, (e.g., REITs, DPPs and BDCs) historically have been more often designed for the brokerage versus investment advisory channel, although platform availability for these products is expanding. If the product was structured and sold as a brokerage product, which means a commission was charged, it generally is not eligible to be held in an Advisor Managed Account, unless it is excluded from billing

In an Advisor Managed Account, your IAR typically will diversify your holdings across various asset classes unless your objective is to invest in specific assets. The percentage weightings within the asset classes will be based on your risk profile, investment objectives, individual preferences and availability. You will have the opportunity to meet with your IAR to periodically review the assets in your Advisor Managed Account. We recommend you and your IAR meet on a regular basis to review your financial situation, investment objectives and current holdings, and you should let your IAR know about any changes in your circumstances in the meantime.

IFP does not pool your assets with those of other customers. IFP provides continuous and regular supervisory services over what are known as separately managed account. Among other things, the advice and management of your account are tailored to your individual and specific needs and objectives. Also, you retain the right to add or withdraw securities or cash, pledge securities, and vote securities. You will receive periodic statements directly from the account custodian.

³ The scope of the financial planning services is defined in the Financial Planning & Consultancy Agreement. *Unless* the Financial Planning & Consultancy Agreement specifies that the planning and investment advisory services are continuous and regular, ongoing account-related services, any duties, fiduciary other otherwise, shall terminate with the delivery or completion of the financial plan, *unless* a separate investment advisory contract is signed that specifies such ongoing services shall commence or remain in the scope of services provided by IFP/IAR.

⁴ ITEM 5, Fees and Compensation, "*Financial Planning and Consulting Fees.*"

We offer both discretionary and non-discretionary portfolio management services. If you want your IAR to have discretion over the timing and amount of securities purchased or sold in your account ("Limited Trading Authorization"), you will be asked to sign agreement providing such authorization. Such an agreement is referred to several ways, including Limited Power of Attorney, Letter of Authorization or with the investment advisory agreement itself, with specific language to refer to authorizing your IAR to place orders for your account without contacting you in advance. Such Limited Trading Authorization places more power and trust with your IAR, and if you proceed in that way, you should be comfortable with the investment management approach and plan, and understand that the implementation of that approach/plan is within the control of your IAR.

If you do not want your IAR to have discretion, your account will be non-discretionary and your IAR will need to speak with you directly to obtain authorization before placing trades. You should understand that any delay in obtaining your authorization to execute a recommendation could result in less favorable transaction terms, including a higher security transaction execution price depending on prevailing market conditions.

Some IARs limit advice to specified product types such mutual funds, whereas others will provide advice on a full range of securities. Some IARs develop models or strategies that are generally applied across all clients while other IARs will develop truly individualized portfolios for each client.

Some IARs will utilize an automated investment program through which you are invested in a range of investment strategies constructed by your IAR. These types of programs assist your IAR in determining your investment objectives and risk tolerances in order to select an appropriate investment strategy and portfolio. Additionally, these programs assist your IAR in managing your portfolio on an ongoing basis through automatic rebalancing and tax-loss harvesting (if applicable). However, this could lead to less frequent contact with your IAR.

IFP ASSET MANAGEMENT

IFP Asset Management ("IFPAM") offers a variety of model portfolios from which investors choose. IFP Asset Management model portfolios which are created and managed on a discretionary basis by IFP's Investment Management team. In instances where your IAR uses IFP Asset Management, your IAR will help you determine which IFP models are best suited for you based on your risk profile, investment objectives, and preferences, leaving the actual trading decisions to IFP's Investment Management team. IFP Asset Management offers a variety of model portfolios with varying investment product types, including mutual fund and ETF portfolios, equity portfolios and fixed income portfolios. On a case-by-case basis, IFPAM also offers to manage portfolios according to models that an IAR may provide.

The IFPAM enables its IARs who do not want to serve as RPM to have IFPAM manage the money.

The IFPAM service model for its IARs is as follows:

PROCESS

ANALYZE

Analyze how the IAR is currently handling the asset management portion of the IAR's business and whether the IAR thinks IFPAM could provide value.

DISCUSS

Schedule a consultative call to review the IFPAM team, services, and model portfolios so the IAR can better understand how IFPAM can increase the enterprise value of the IAR's practice.

IMPLEMENT

Once the IAR is confident IFPAM is a good fit for the IAR, IFPAM will work with the IAR to devise an implementation strategy to move over any accounts that the IAR may wish to have IFPAM manage.

GROW

After implementation, IAR can go back to focusing on the IAR's clients, serving as the relationship manager, but teaming up with IFPAM to manage the client's money.

SERVICE

ACCESS IFPAM'S PRE-BUILT MODEL PORTFOLIOS

Eliminates the need to evaluate securities, analyze mutual funds and ETFs, and construct asset allocation strategies.

IFPAM CAN CUSTOMIZE STRATEGIES FOR HIGH-NET-WORTH CLIENTS

Eliminates the need to research positions, understand portfolio construction, and continually monitor custom strategies.

IFPAM WILL TRADE AND REBALANCE YOUR ACCOUNTS AND HANDLE OPERATIONAL TASKS SUCH AS INVESTING CONTRIBUTIONS AND FREEING UP CASH FOR WITHDRAWALS

Eliminates the need to learn new trading software and stop other tasks to execute trade orders.

ACCESS INVESTMENT RESEARCH

Eliminates the need to meet with wholesalers, perform extensive due diligence, and write trade rationales.

MODEL PORTFOLIO OFFERINGS

BROAD MODEL STRATEGIES

PASSIVE

Seeks to provide a low-cost, tax-efficient portfolio with minimal tracking error to its designated benchmark.

STRATEGIC

Built for long-term investors who desire an asset allocation model that is always fully invested.

TACTICAL

Actively managed and designed to incorporate IFPAM's best ideas. The portfolios are traded more frequently than the strategic models and can go to cash when market conditions warrant.

QUANTITATIVE

Asset allocation decisions are driven entirely by pre-defined rules that are algorithmic in nature. The models are designed to provide a level of risk management and can hold elevated cash.

INDIVIDUAL EQUITY

Built for investors who want to gain exposure to domestic companies through individual stocks. These models are designed to capture certain market factors, such as quality, minimum volatility, and momentum.

INCOME ORIENTED

Designed to provide investors with current income, either through interest payments or dividends.

SPECIFIC MODELS

The Protective Asset Allocation Strategy

The Protective Asset Allocation Strategy is a quantitative, rules based, momentum strategy that moves to cash very quickly when asset classes begin demonstrating negative price momentum. The strategy considers momentum to choose between a global universe of 12 "Risk Assets," holding up to 6 at any given time (model can hold 7 assets if the crash protection asset is short-term treasuries). Each of the 12 risk assets are first analyzed by looking at their absolute momentum, e.g., return relative to the risk-free rate, and then by comparing the asset's current price to its 13-month, month-end moving average.

The model considers the ratio of positive momentum asset classes to the entire 12 Risk Asset universe. Depending on the ratio of positive momentum assets to the universe, the model will deploy a proportionate amount to the positive momentum risk assets and cash. This is the most conservative of our quantitative strategies. The model is traded on the first trading day of each calendar month.

The Robust Asset Allocation Strategy

The Robust Asset Allocation Strategy divides the portfolio among 7 global asset classes: U.S. Momentum, U.S. Large Cap Value, International Equities, International Value, U.S. Real Estate, Commodities, and Intermediate Term Treasuries. The products used in each asset class causes the portfolio to have a slight tilt towards value and momentum than our other quantitative strategies.

The Robust Asset Allocation model allocates positions by first analyzing each asset class' 12-month return compared to the risk-free rate and also its price relative to its 12-month moving average. If the asset class' price is above its 12-month moving average and also its 12-month return is positive, the portfolio will take a full position in the asset class, if only one of the conditions is true, the portfolio will take a half position in the asset class, and if neither condition is true, that portion of the portfolio is left in cash.

When fully allocated (e.g., both conditions are true for each asset class) the model will consist of 20% US Momentum, 20% US Large Cap Value, 20% International Equities, 20% International Value Equities, 5% US Real Estate, 5% Commodities, and 10% Int-Term U.S. Treasuries. The model is traded on the first trading day of each calendar month.

The Elastic Asset Allocation Strategy

The Elastic Asset Allocation Strategy considers momentum measured over multiple time frames, as well as correlation between assets, to allocate across both a global universe of risk assets and cash. The assets traded in this strategy include the U.S. equities ("SPLG"), the NASDAQ 100 ("QQQ"), international equities ("SPDW"), emerging markets ("SPEM"), Japan Equities ("FLJP"), intermediate term U.S. Treasuries ("IEF"), and high yield bonds ("JNK"). The model' s positions are weighted based on the geometrical weighted average of the historical returns, volatilities, and correlations. The model is flexible, or "elastic" , in the sense that positions don't have pre-defined weights, but are instead weighted based on their cardinal ranking of the above factors. The model is designed for tactical asset allocation and is traded on the first trading day of each calendar month.

The Defensive Adaptive Asset Allocation Strategy

The Defensive Adaptive Asset Allocation Strategy is a "meta" model of sorts, combining successful elements from multiple other quantitative strategies:

- Vigilant Asset Allocation: The strategy measures momentum across multiple timeframes from 1 to 12 months, with more recent momentum given more weight.
- Dual Momentum: Each asset traded must exhibit both positive momentum and stronger momentum than competing assets.
- Adaptive Asset Allocation: Min variance optimization with a "weighted" covariance matrix is used to determine how much of the portfolio to allocate to each asset.

- **Defensive Asset Allocation:** The strategy uses the same "canary universe" concept to know when to "turn off" the strategy and move to defensive assets.

Assets traded in the model include: US Equities ("SPLG"), Europe Equities ("SPDW"), Japan Equities ("FLJP"), Emerging Market Equities ("SPEM"), US REITS ("RWR"), International REITS ("RWX"), Intermediate Term Treasuries ("IEF"), Long Term Treasuries ("SPTL"), Commodities ("PDBC"), and Gold ("SGOL").

The portfolio is traded on the first trading day of the month. This is one of the more actively traded quantitative strategies.

The Adaptive Asset Allocation Strategy

The Adaptive Asset Allocation Strategy combines momentum with a minimum variance portfolio to trade a diverse array of global asset classes.

The strategy rules are as follows:

- At the close on the last trading day of the month, calculate the 6-month (126-day) return for each of the following 10 asset classes: US equities (represented by SPLG), European equities ("SPDW"), Japanese equities ("FLJP"), emerging market equities ("SPEM"), US REITs ("RWR"), international REITs ("RWX"), int-term US Treasuries ("IEF"), long-term US Treasuries ("SPTL"), commodities ("PDBC") and gold ("SGOL").
- Go long at the close the five assets (e.g., half of the portfolio) with the highest 6-month return. Weight the five assets according to minimum variance optimization, using a "weighted" covariance matrix calculated based on 126-day correlation and 20-day volatility.
- Hold positions until the first trading day of the following month, at which point the portfolio is rebalanced based on the new signals.

The Vigilant Asset Allocation Strategy

The Vigilant Asset Allocation Strategy is an aggressive momentum strategy that allocates 100% of the portfolio each month to a single asset from a small basket of either offensive or defensive assets. The strategy's approach to measuring momentum is heavily biased towards very recent months, with an asset class' one month momentum determining 40% of the asset class' momentum score, while the twelve-month momentum only determines 2% of the score. This makes the Vigilant Asset Allocation strategy quicker to respond to market changes, but can also lead to high portfolio turnover. The strategy also makes use of a concept called "breadth momentum, in which the allocation to defensive assets is determined by the entire universe of risk assets, as opposed to the particular asset class. Put another way, the strategy uses market breadth to determine how much of the portfolio to allocate defensively.

If all four of the offensive assets exhibit positive momentum scores, the strategy will allocate 100% of the portfolio to the offensive asset with the highest momentum score. If any of the four offensive assets exhibit negative momentum scores, the strategy will allocate 100% of the portfolio to the defensive asset with the highest score (regardless of whether the score is > 0).

The assets traded in this strategy include Offensive and Defensive positions. The Offensive positions consist of U.S. equities (SPLG), international equities (SPDW), emerging markets (SPEM), and US aggregate bonds (SPAB). The Defensive positions consist of US corporate bonds (SPIB), intermediate term U.S. Treasuries (IEF), and cash.

The model is traded on the first trading day of each calendar month.

The Tactical Bond Strategy

The Tactical Bond Strategy trades a broad basket of bond assets based on "dual momentum. The strategy trades between the following asset classes: int-term US Treasuries, long-term US Treasuries, TIPS, US Corporate Bonds, US High Yield Bonds, International

Aggregate Bonds, emerging market bonds, and cash.

The strategy rules are as follows:

- At the close on the last trading day of the month, calculate the 6-month return for each of the eligible asset classes.
- Select the 3 assets with the highest 6-month return. For each, if the return is both positive and greater than the 6-month return of BIL (3-month US Treasuries ETF), allocate 1/3 of the portfolio on the first trading day of the next month, otherwise allocate that portion of the portfolio to cash.

The strategy is built for investors who want fixed income exposure, but also want a safety valve in place if we enter a new regime of rising interest rates.

The model is traded on the first trading day of each calendar month.

IFPAM accounts are managed on a discretionary basis. IFP does not pool your assets with those of other customers. IFP provides continuous and regular supervisory services over what are known as separately managed accounts. Among other things, the advice and management of your account are tailored to your individual and specific needs and objectives. Also, you retain the right to add or withdraw securities or cash, pledge securities, and vote securities. You will receive periodic statements directly from the account custodian.

The Sector Rotation Strategy

The Sector Rotation Strategy is a momentum strategy that rotates between the various sectors within the U.S. economy. The model selects US stock market sectors displaying relative strength, but includes a safety valve that moves the entire portfolio to cash when the broader market is showing weakness.

The rules of the strategy are as follows:

- At the close on the final trading day of the month, calculate the return for each sector over the last 1, 3, 6, 9 and 12 months, and average those results together.
- Go long the top 3 sectors at the open of the next trading day, with 1/3 of the portfolio allocated to each sector, unless the S&P 500 (represented by SPY) closes below its 10-month moving average.

If the S&P 500 closes below its 10-month moving average, move the entire portfolio to cash.

The Acquirer's Multiple Strategy

The Acquirer's Multiple Strategy is a valuation ratio used to find attractive takeover candidates. This metric targets undervalued companies that are generating strong operating earnings relative to their enterprise value. This not only helps find companies that are attractive for takeover, but also has proven to be a valuable predictive tool for future stock returns. In addition to finding companies with low acquirer's multiples, this model further examines how persistent each company's earnings are. Earnings persistence measures how much of a company's earnings are cash based versus accrual based (recognizing revenue without a cash transaction). This filter removes companies with high amounts of accrual earnings (low earnings persistence).

This model is somewhat contrarian in nature, as it often invests in companies that have fallen out of favor in the public eye, but still are generating ample operating income relative to their enterprise value.

Focused Shareholder Yield Strategy

The Focused Shareholder Yield Strategy invests in companies demonstrating strong Shareholder Yield. Shareholder Yield is measured by summing a company's dividend yield, its share buy-backs (the percentage of shares outstanding that have been repurchased or issued over the last year), and its net debt pay down (the amount of debt the company was able to reduce from its balance sheet). Essentially, the model is looking for companies that have been returning capital to shareholders in predictable manner. The model is not solely focused on obtaining dividend income, so should not be used as a substitute for a dividend or income strategy,

but instead should be used for total return. The strategy tends to have a value tilt.

The Focused Shareholder Yield model is designed to be approximately sector neutral to the S&P 500. Each position receives an equal weight in the portfolio. The constituents are changed once per year based on the model's screening criteria.

Focused Minimum Volatility Strategy

The Focused Minimum Volatility Strategy attempts to provide investors with market-like returns with less volatility than the broad market, as measured by the S&P 500. The model aims to smooth out the returns by reducing downside during bear markets, while still participating in up markets, albeit possibly to a lesser extent. By limiting drawdown, the model can help investors avoid emotional reactions to market sell-offs, which can cause them to sell at inopportune times.

The model invests in companies that have previously demonstrated lower than average volatility relative to the broader U.S. equity market.

The Focused Minimum Volatility model is designed to be approximately sector neutral to the S&P 500. The positions are then weighted based on their inverse volatility. The constituents are changed once per year, based on the model's screening criteria.

Focused Quality Strategy

Focused Quality Strategy invests in companies with healthy balance sheets, earnings that are persistent in nature, and strong cash flow relative to liabilities. Companies evaluated typically demonstrate financial strength through high capital and sales profitability, high levels of free cash flow, low levels of debt, and low levels of accruals. Companies included in the model also tend to have a history of earnings stability.

The Focused Quality model is designed to be approximately sector neutral relative to the S&P 500. Each position receives an equal weight in the portfolio. The constituents are changed once per year, based on the model's screening criteria.

Focused Dividend Strategy

Focused Dividend Strategy invests in companies that pay relatively higher levels of dividends. The model screens for companies that not only are paying dividends, but also for those companies that have had a history of consistently paying and/or increasing their dividends. Stocks in the portfolio are also analyzed by their payout ratio, the amount of dividends being paid relative to the amount of earnings a company is generating, to ensure that the dividend is sustainable.

The weights of each position in the Focused Dividend model are then equally weighted. The constituents are changed once per year, based on the model's screening criteria.

Focused Momentum Strategy

Focused Momentum model invests in companies that are experiencing positive price momentum. The philosophy behind the strategy is "the trend is your friend". The Focused Momentum model takes advantage of the fact that markets tend to continue to trend in the direction they're going much longer than most people assume possible. Investments that have performed well tend to continue to perform well and investments that have performed poorly tend to continue to perform poorly. However, there is always the risk and the inevitable reality that any trend will reverse, and when it does, client will lose money. So, the right timing is essential.

The Focused Momentum model tends to work best in strong upward trending markets. The strategy tends to lag in choppy, sideways markets. The strategy tends to have relatively high turnover as the constituents are reviewed and modified every month. Due to the relatively higher turnover and potential for realizing gains and losses, this strategy works best in qualified accounts, which means it is often not appropriate for non-qualified accounts.

WRAP FEE PROGRAM VERSUS PORTFOLIO MANAGEMENT PROGRAM

IARs provide asset management services through both Wrap Fee programs and traditional management programs. Under IFP's traditional management program there are two separate types of fees. IFP charges an investment advisory fee for advisory services, and other fees are charged by activity (e.g., a ticket fee), usage or service for each transaction (e.g., buy/sell/exchange) or usage or service by IFP, its custodian and/or our affiliated introducing broker-dealer, IFP Securities, for accounts held at the qualified custodian. Under a Wrap Fee program, advisory services and transaction services are provided for one fee to the client. From a management perspective, there is not a fundamental difference in the way an IFP IAR manages Wrap Fee accounts versus traditional management accounts. The significant difference is the way in which transaction services are paid. For Wrap Fee program, there is a separate disclosure document that should be provided to you, which is referred to as the Wrap Fee Brochure, and the purpose of the brochure is, among other things, to alert you about the features of the service, conflicts-of-interest and the fact that because the Wrap Fee "bundles" all services and transactions into 1 cost, it could quite possibly result in higher overall fees assuming a certain level of transactions and other services that you may want or experience in your account. The maximum fee for Wrap accounts is 2.5%, which coincides with IFP's maximum fee, but notably, a non-Wrap fee arrangement is more likely to be less than 2.5%, on average, because transaction costs and other service costs are paid in addition to the investment advisory fee. You should discuss with your IAR whether a Wrap Fee program would be better or worse for you considering the level of transactions and other service needs you have.

INVESTMENT TOOLS/ROBO ADVISOR MODEL

For smaller accounts and those that do not require or desire an IAR to provide a more tailored approach to investment advice, IFP has a model that enables client to utilize a technology-enabled advisory service, which is hosted by Pershing, LLC (under the program name of "Advisor Engine", <https://www.advisorengine.com/>). The essence of the service/model is as follows:

- The recommended Model Portfolio for a client is determined by the client completing the Risk Tolerance Questionnaire ("RTQ") which has a total of 13 questions. The questions cover age, time horizon, income levels, investment goals and several situational questions to gauge the investor's ability and desire to handle portfolio risk. Risk is defined by standard deviation and the results of the questionnaire are scored and matched to a Model Portfolio that is the closest to the score. The questions in the RTQ are weighted within a proprietary scoring formula developed by IFPAM. The RTQ is the sole basis for the initial selection of the Model Portfolio for the client but can be overridden by the IAR.
- The risk scoring approach in the online tool mirrors what IARs do in their full-service offering. It is not a black-box risk algorithm, but rather reflects the questions in the RTQ and their weightings.
- The IAR ultimately has the ability to override the suggested Model Portfolio if for qualitative reasons the IAR believes the client should be invested differently. An example may be if the IAR believes the client has a tendency to overstate their ability to handle portfolio volatility and the IAR recognizes this from meetings and personal interactions, so they may decide to reduce the risk of the portfolio the client ultimately invests in. As with any investment scenario, the more the IAR knows about the client's total investment portfolio, the risk tolerance proclivities, investment objectives, liquidity needs, etc., the better the IAR can determine whether the RTQ recommended portfolio is the best fit for the client.
- The model portfolios created by IFPAM are constructed using Modern Portfolio Theory (MPT) and include multiple Exchange Traded Funds (ETFs) to form a properly diversified portfolio for the client. The program consists of taxable and non-taxable accounts.
- IFP uses Smartleaf (<https://www.smartleaf.com/>) to rebalance our model portfolios. Nightly IFP sends Smartleaf portfolio and model details to initiate the rebalancing process. Overnight Smartleaf analyzes the data and sends trade recommendations to IFP. On the next trading day, IFP picks up the orders queued out of the Smartleaf system for submission. IFP's order management system connects with our custodian, Pershing to place the trades. IFP uses Pershing for both trading and custodial services for such

client assets, and Pershing provides the official record of such account-related data, including positions and transactions.

- As comprehensive as the RTQ attempts to be in capturing all relevant data regarding a client's investment profile there may be items the questionnaire does not address and the model itself may have design errors that do not fully capture what you may deem to be the optimal portfolio. As a result, the recommended Model Portfolio may not be the optimal portfolio for the client. Discussing the recommended Model Portfolio with the Advisor in all situations is highly recommended.

This service offers a small account solution for IARs and clients. It allows clients with maybe a smaller amount of assets to access our models and a more sophisticated level of money management tools that perhaps they wouldn't otherwise receive. AdvisorEngine is a mechanism that allows you to service entry-level accounts. That level of a client can come in, and because the process is automated, receive similar service that you provide to your higher net worth clients. And if IARs take care of a client's assets when they are smaller through technology like AdvisorEngine, then the IAR/client relationship may gravitate over time as more complex advice is needed and if and when the account value develops over time.

The limitations of such a service are that the models may not provide as finely tailored of an investment plan or investment management approach as a more individualized approach. The appropriateness of this service should be discussed between the IAR and you, the client.

USE OF THIRD-PARTY ASSET MANAGERS

Some IARs offer advisory services by referring you to outside, or unaffiliated, asset managers that are registered or exempt from registration as investment advisers. Third-party asset managers are responsible for monitoring client accounts and making trades in client accounts when necessary. The nature of the advisory and management services are determined between the client and the 3rd party investment adviser.

PENSION PLAN ADVISORY AND CONSULTING SERVICES

IFP, through its affiliated IARs, provides consulting and advisory services to both ERISA and Non-ERISA employer-sponsored retirement plans, including, but not limited to, 401(k), 457(b), 403(b), nonqualified, pension and profit-sharing plans (collectively, "Plans" or individually, "Plan") on both a one-time and/or ongoing basis.

IFP offers a suite of detailed engagement agreements which are customized for each client relationship and executed by the Plan's designated fiduciary upon conclusion of a careful review, which, at times, includes the client's independent legal counsel. Through its agreements, IFP is engaged to provide investment advisory services on either a "non-discretionary" basis (serving as a "fiduciary" as defined by §3(21)(A)(ii) of the Employee Retirement Income Security Act of 1974 ("ERISA")); or on a "discretionary" basis and thus will serve as an "Investment Manager" as defined by §3(38) of ERISA. Certain other additional services available from IFP would be considered non-fiduciary by definition and function and are explicitly detailed within the Plan's executed agreement.

For non-discretionary services, IFP and its IARs will act in a solely advisory capacity and will not have or exercise any discretionary authority or control relative to the management or investment of the assets of the respective Plan.

For discretionary services, IFP and its IARs will be designated as the Investment Manager to the Plan and assume responsibility for the investment selection and asset management for the Plan.

Our agreements offer our clients the opportunity to select one or more of the following services in various engagement categories:

ERISA 3(21) Investment Adviser Fiduciary Services (Non-Discretionary):

- Development of an Investment Policy Statement (“IPS”);
- Recommendations for the selection and monitoring of the Plan’s Designated Investment Alternatives (“DIAs”) that meet the standards set forth within the IPS or as established by other stated goals, objectives and restrictions communicated to IFP by the Plan’s fiduciaries that also satisfy ERISA’s §404(c) requirement that participant-directed retirement plans offer a “broad range” of investment options;
- Recommendations for selecting and monitoring the Plan’s Qualified Default Investment Alternatives (“QDIAs”);
- Recommendations for and monitoring of Third-Party Investment Managers, if utilized;
- Investment performance measurement, analysis and reporting;
- Attendance and active participation at Plan Oversight Committee meetings; and
- Individualized investment advice options for Plan Participants;

ERISA 3(38) Investment Manager Fiduciary Services (Discretionary):

- Development of an Investment Policy Statement (“IPS”);
- Selection and monitoring of the Plan’s DIAs;
- Selecting and monitoring of the Plan’s QDIAs;
- Investment performance measurement, analysis and reporting; and
- Attendance and active participation at Plan Oversight Committee meetings.

ERISA Non-Fiduciary Services:

- Consulting services to assist the Plan Sponsor with plan design (Settlor) decisions;
- Provide the Plan’s Oversight Committee with fiduciary education and “best practices” awareness as well as advice on the development of a Committee Oversight Charter, if so desired;
- Assistance with selecting and monitoring non-fiduciary vendors (e.g., TPA, Recordkeeper, etc.); and
- Delivering or coordinating individual and/or group investment and plan provision education, enrollment support and general retirement planning guidance.

From time to time with the Plan Sponsor’s permission, IARs can make the Plan or Plan participants aware of and offer services to them available from the IAR that the participant would contract for separate and apart from the retirement plan advisory and consulting services described above specific to Plan assets. In offering or delivering any such additional services, IAR is not providing the services while acting as a fiduciary under ERISA with respect to such offering of services applicability to plan assets. If any such separate services are offered to participants, they will make an independent assessment of the need for or merits of such services without reliance on the advice, judgment or influence of IFP or its IAR.

IFP intends to fully adhere to the guidelines and mandates set forth within the DOL’s Prohibited Transaction Exemption (PTE) 2020-02 which became effective February 16th, 2020 specific to rollovers from qualified plans. As such, IFP will require any participant considering a rollover to complete IFP’s Employer Plan Distribution disclosure and acknowledgment document, which details the rationale for the rollover recommendation and discloses important information and considerations in connection with the rollover decision that are acceptable to the client.

IRA ROLLOVER CONSIDERATIONS

As part of our investment advisory services, IARs can make recommendations to plan participants regarding the rollover of employer sponsored retirement plan assets. In the case where an IAR recommends a retirement plan rollover into an IFP advisory account program, the IAR will earn a portion of the advisory fee. This presents a potential conflict of interest because IARs may have an economic incentive to recommend a rollover of retirement plan assets into an IFP advisory program account.

Plan participants are under no obligation to rollover their retirement plan assets to an IRA with IFP and should carefully consider all relevant factors, such as penalty-free withdrawals, whether loans are permitted, legal protections, required minimum distributions, fees and expenses, service levels, available investment options, employer stock considerations, Federal and State taxes and other competitive alternatives.

IFP requires any participant considering a rollover to complete IFP's Employer Plan Distribution disclosure and acknowledgment document, which details the rationale for the rollover recommendation and discloses important information and considerations in connection with the rollover decision.

RETIREMENT PLAN INVESTMENTS DISCLOSURE AND FEES

Fees for retirement plan services are negotiated prior to the signing of the appropriate IFP Retirement Plan Agreement and includes the negotiated fee to be compliant with ERISA §408(b)(2) mandates. This disclosure is required of all vendors providing services to a retirement plan or its participants and must disclose all direct and indirect compensation they will receive in exchange for the services they provide to a retirement plan. IFP's agreements with its Plan Sponsor clients disclose the services it will provide and the fee it will charge for those services and serves as its required ERISA §408(b)(2) disclosure. See Item 5⁵ below for a description of fees such services, but they generally do not exceed 2% of the Plan assets when AUM-based, or \$250,000 for the large- "mega" Plan market and \$50,000 for the micro-small Plan market (e.g., <\$10 million) when flat fee-based.

See Item 5⁶ below for a description of fees such services, but they generally do not exceed 2% of the Plan assets or \$250,000 for the large Plan market (or \$2,500 for the small Plan market).

TAX EXEMPT ORGANIZATIONS

Some IARs of IFP work with tax exempt programs and provides services to employees of public-school systems and tax-exempt organizations that qualify under Section 501(c)(3) of the Internal Revenue Code. Services are usually provided through the organization's retirement accounts held in an Optional Retirement Plan ("ORP"), also known as a 401(a), 403(b) and 457 accounts. IARs primarily use TIAA or Fidelity TEM to provide these services. Both programs apply a maximum fee allowed to be charged of 2.5% of assets under management.

COLLECTIVE INVESTMENT TRUST ("CIT") SUB-ADVISORY SERVICES

Wilmington Trust ("WT") selected IFP as the replacement investment sub-advisor to five CITs they established and marketed to ERISA-qualified employer sponsored retirement plans as Designated Investment Alternatives ("DIAs"). IFP's sub-advisory duties are that of a fiduciary as defined under ERISA §3(21) and IRC §4975(e)(3) with respect to the CITs and to those assets of the participating plans invested in these specific sub-advised CITs. IFP is solely engaged to advise WT, as the Trustee of the CITs, on recommended investment holdings and asset allocations that achieve the stated investment objective of each CIT. IFP does not have custody of or execute trades for any of the five CITs. Further, WT retains final approval authority for accepting or executing any recommendation made by IFP and WT also retains proxy voting responsibility. IFP is paid six basis points for its services.

⁵ Item 5, Fees and Compensation, "*Retirement Plan Investment Advisory Fees.*"

⁶ Ibid.

IFP does not intend to offer these specific CITs to its retirement plan clients, but it was determined they were existing holdings within six plans already advised by an IFP IAR with the positions having been voluntarily added before IFP became the Sub-Advisor. These six plans have been notified of the potential conflict of interest.

ACCOUNT TRANSFERS FROM ANOTHER FIRM TO IFP

When IFP hires or associates with an IAR or registered representative (“RR”) of IFP’s affiliated broker/dealer, you are not obligated to transfer your other investments and assets to IFP in order to retain a relationship with your IAR or RR. Any recommendation made by our IARs must be in your best interest, and you should consider the relative fees, platform services, investment options, tax effects, proprietary or company securities held through the other firm, etc. IFP encourages you to ask your IAR why any recommended account or investment transfer is in your best interest.

LIMITS ADVICE TO CERTAIN TYPES OF SERVICES

With some exceptions, IFP IARs are available to offer advice on most types of investments owned by client and, at the specific request of a client, will explore investment options not currently owned by a client. However, IARs are not permitted to provide advice on futures or commodity contracts. We also require that third-party asset managers used by IARs be approved by IFP. If an IAR is dually registered as an RR of IFP Securities, IAR will be restricted to providing advice based on proper FINRA registrations. For example, if an IAR does not hold a Series 7 license with IFP Securities, but rather and holds only the Series 6 registration, the IAR will be restricted to providing advice on only investment company products such as mutual funds and variable annuity contracts.

BUSINESS CONTINUITY PLAN

IFP has established a Business Continuity Plan (“BCP”). The BCP describes how IFP would respond to significant business disruptions and provide you with alternative contact information and access in the event of a significant business disruption. It is also available upon written request. It is also available on our Web Site at <https://ifpartners.com/business-continuity-plan/>.

ASSETS UNDER MANAGEMENT

As of December 31, 2020, IFP had assets under management of \$8,991,966,915.

Assets Under Management/Advisement		# of Accounts
Discretionary	\$4, 774, 692, 154	21, 259
Non-Discretionary	\$4, 217, 064, 761	7, 296
Total	\$8, 991, 796, 915	28, 555

ITEM 5. FEES AND COMPENSATION

In addition to the information provided in the Advisory Business section, this section provides details regarding our services along with descriptions of each service's fees and compensation arrangements.

DESCRIPTION OF FEES AND COMPENSATION

ASSETS-BASED ("AUM") FEES	
HOW ESTABLISHED	NEGOTIATED
RECOMMENDED MAXIMUM	1.5%
ABSOLUTE MAXIMUM	2.5% ⁷

The maximum assets under management fee is 2.5%. Also, such fees will be determined by the respective IAR, as contemplated in the contract you sign with the IAR, and such amounts may be a fixed percentage for the balance of the assets in the account, or may be tiered down as the value of the account increases, subject to a methodology disclosed in your contract with IFP.

Billing Overview

AUM fees are assessed quarterly or monthly at the election of the client and the IAR. As of January 1, 2021, these fees are calculated using an average daily balance method. For accounts billed quarterly, IFP historically allowed for 3 different cycles in terms of the month the accounts are billed: January, April, July, and October; February, May, August and November; or March, June, September and December. Starting in October of 2019, IFP updated its advisory account information form to allow for only one quarterly cycle going forward for investors who opt for quarterly billing: January, April, July, and October. Accounts previously placed on the alternative quarterly cycles may remain on those cycles.

Billing Calculation Prior to 2021

For accounts historically opened, IFP has used the month-end balances to calculate and charge fees in the month following the last month of the respective quarterly or monthly cycle.

Billing Calculation 2021 and Going Forward

Starting from January 1, 2021, IFP now uses an average daily balance billing methodology to calculate and charge fees each cycle, in lieu of using the previous month-end balance, as described in the previous section. This simplifies some aspects of the billing approach and also captures money infusions and disbursements of the valuation point for purposes of fee assessment.

INVESTMENT MANAGEMENT (ADVISOR MANAGED/"REP AS PORTFOLIO MANAGER")

IFP IARs negotiate your fee, and you and your IAR must agree upon the fee contractually, and IFP limits any assets under management fee to 2.5% per annum.

In exchange for such fees, IARs provide investment advisory and management services, defined as giving continuous and regular supervisory (investment advice/management) services to a client and making investments based on a client's individual needs through securities accounts. In this program, IARs are responsible for determining investment recommendations and responsible for implementing transactions. IARs will manage your accounts in accordance with your individual needs, objectives and risk tolerance.

These accounts are managed on either a discretionary trading basis or non-discretionary trading basis as agreed upon between you and your IAR. In order to have trading authorization on your account, you must grant your IAR limited power of attorney over your account. This can be done by executing an IFP investment advisory agreement.

⁷ This maximum is **inclusive of any additional asset under management fees of Third Party Asset Managers ("TPAMs"), Asset-Based platform fees and any other asset-based fees**. Also, for any fees in excess of 1.5% should elicit a conversation between the client and the IAR about why a fee level exceeding 1.5% is warranted.

If you wish to contract with IFP and IAR for asset management services, you are required to use only those broker-dealers and custodians approved by IFP. IFP recommends broker-dealers and custodians based on relationships that have been established. IFP has an affiliated broker-dealer by the name of IFP Securities. As such, IFP uses IFP Securities for broker-dealer services, which uses Pershing, LLC (“Pershing”) to clear, settle and hold such securities position in custody. For accounts networked by IFP apart from those of its affiliated broker/dealer, IFP has direct relationships with other custodians, including Schwab Institutional (Schwab), Pershing Advisory Services (“PAS”), Fidelity Institutional Wealth Services (FIWS) an TD Ameritrade Institutional (TD), which provide brokerage execution through their own broker/dealer(s).

If using Pershing as the clearing firm, you should understand that IFP Securities serves as the introducing broker-dealer for all accounts through this investment management platform and clears securities transactions on a fully-disclosed basis. A conflict of interest exists because other broker-dealers and custodians charge fees that could be more or less than using Pershing through IFP.

Various investment strategies are provided through this service; however, a specific investment strategy is determined to focus on your specific goals and objectives. Investment strategies and philosophies used vary based on the IARs providing advice.

Models and strategies used by one IAR are different than strategies used by other IARs. Some IARs limit your advice to mutual funds while others will provide advice on a full range of securities. Various asset types are available and include, but are not limited to, no-load mutual funds, load-waived mutual funds, equities, fixed income securities, options, variable annuity and their subaccounts, cash and cash equivalents. Alternative investments including, but not limited to, Real Estate Investment Trusts and limited partnerships are held within the account as a convenience to the customer, or they are purchased at Net Asset Value and included within the managed portfolio and billed at a fee. Some IARs develop models or strategies that are generally applied across their clients while other IARs will develop truly individualized portfolios for each client.

Fees, fee structure, and experience will vary by IAR. Nevertheless, IFP’s maximum fee is 2.5% of asset under advisement/management. Furthermore, IARs determine advisory fees differently. For example, some IARs will household all or a subset of your managed accounts together to determine a fee breakpoint (tiered fee schedules) or charge a fee based on each account size. Additionally, some IARs have a flat fee assigned to the account regardless of account value. There are advantages and disadvantages to all fee structures, but each IAR sets their own variances within IFP’s maximum fee structure. This causes some clients to be treated in a more favorable manner than other clients when you do not receive tiered, household or do not negotiate lower pricing with your IAR vis-à-vis cheaper fees available with other investment advisers, including other IARs within IFP.

The exact fee is negotiated on a client-by-client, or account-by-account basis. These fees are disclosed to you in the investment advisory agreement that you sign in advance of services being provided. IARs have an incentive in the fee charged to you as they receive a percentage of the fee with the remaining amount of the fee retained by IFP. Since IFP provides investment advisory service through independent contractors/agents, IFP, relative to other firms and its industry peers, pays a high percentage of the total fees collected from you to the IAR, which means any conflicts regarding the fees paid to the IAR is relatively more pronounced since the IARs are paid up to 95% of all fees assessed to you. A change in your fee will be documented on the appropriate form when being increased. When your fee is decreased, a verbal authorization can be accepted.

IFP generally will debit the fees on a periodic basis from the account as disclosed in your investment advisory agreement.⁸ IFP generally uses average daily balance, in advance or in arrears, at the election of the client, in lieu of the previous month-end balance for all accounts.⁹

⁸ For Pension Plan business, the fee methodology differs for reasons explained elsewhere herein.

⁹ IFP will generally calculate such fees itself, either by the Home Office, or, in some cases in the IAR’s Office, subject to submitting the supporting material for such calculations to the IFP Home Office Compensation Team. However, in the case of fee-based annuities, pursuant to operational conventions that exist with various insurance companies that provide fee-based annuities for the Investment Adviser Industry, the respective insurance companies conduct the fee calculations, and furnish such calculation to the Registered Investment Advisers such as IFP. Such insurance companies would automatically deduct the fee from the account and pay IFP its investment advisory compensation.

Some Insurance companies provide for customers to pay for investment management fees with a distribution from their nonqualified deferred annuities provided the distributions adhere to certain conditions.¹⁰

You will also choose, in conjunction with your IAR, whether to pay a ticket charge per trade executed or an asset-based fee for trade execution. Fees for trade execution are separate from the advisory fees. The amount of trades placed in the account is a factor that has a bearing upon the relative cost of the program. If there are only a few trades placed in the account over a period, it is possible that paying for advisory services and trade execution separately are less expensive than the advisory fee. The opposite is also true; if there are a large amount of trades placed in the account over a period, it is possible that paying for advisory services and trade execution separately are more expensive. Some IARs will pay for trade execution, regardless of per trade or asset-based, on your behalf. This creates a conflict as it could incentivize an IAR to trade less frequently. When an IAR pays for trade execution IAR has the availability to purchase and sell investments with low or no ticket charges associated with them. This creates a conflict as IAR will receive a larger portion of the advisory fee than if you paid for the trade execution.

You will incur other charges imposed by third parties besides IFP in connection with investments made through the account, including but not limited to confirmation fees, mutual fund 12b-1 fees, subaccounting fees, contingent deferred sales charges, variable annuity fees and surrender charges, short-term redemption fees, qualified retirement plan fees and account maintenance fees. A description of these fees and expenses are available in each investment company security's prospectus. You should be aware that mutual funds generally charge a management fee for your services as investment managers. The management fee is called an expense ratio. For example, an expense ratio of 0.50 means that the mutual fund company charges 0.5% for your services. These fees are in addition to the fees paid by you to IFP. Fund companies also charge each fund shareholder an investment management fee that is disclosed in the fund prospectus. Performance figures quoted by mutual fund companies in various publications are after your fees have been deducted. Neither IFP, nor IAR, will receive a portion of the 12b-1 fee generated by mutual fund investments. Not all mutual funds pay a 12b-1 fee, please refer to your funds' prospectus for fund specific information as it relates to your account. Any 12b-1 fee for mutual funds generated from account assets will be credited back to your advisory account, except in the case of money market mutual funds where the custodian has structured those product to pay IFP. You will see the credits on your account statements. Income tax liabilities may result from the sale of individual securities within your account, unless the account is otherwise tax sheltered or tax deferred. Income tax liabilities directly reduce investment returns. You are responsible for all tax liabilities arising from the sale of individual securities within your account. You should consult your tax advisor as IFP cannot offer tax advice.

¹⁰ Payment of fees from an eligible nonqualified deferred annuity:

In PLR 2019-101342, the Internal Revenue Service (IRS) has indicated that distributions to pay for investment management fees from nonqualified deferred annuities that meet certain criteria will not be considered taxable. Those criteria include:

- The annuity contract is designed for owners who will receive ongoing investment advice from an investment adviser who is appropriately licensed and in the business of providing investment advice.
- The annuity contract owner will authorize investment advisory fees to be paid periodically to the adviser from the annuity contract's cash value.
- The fees will be determined based on an arms-length transaction between the owner and adviser.
- The fees cannot exceed an amount equal to an annual rate of 1.5% of the annuity contract's cash value determined at the time and in the manner provided by the fee authorization but in all events based on such cash value during the period to which the fees relate.
- The fees will compensate the adviser only for the investment advice that the adviser provides to the owner with respect to the annuity contract and not for any other services or accounts, nor reduce fees for other services or accounts.
- While the fee agreement is in place the annuity contract will be solely liable for the payment of the fees directly to the adviser.
- The owner may not pay the fees to the adviser from other accounts or assets nor can they direct the payment of the fees for any other purpose or to any other person.
- The adviser will not receive a commission for the sale of the annuity contract.

Essentially, if the annuity and the attendant investment advisory fee agreement meet the above criteria, the payment of the investment advisory fees will be considered an expense of the contract and not a distribution to the owner. Thus, the payment from the cash value of the annuity will not be treated as a taxable distribution. Otherwise, it will be considered a taxable distribution and the customer will receive a 1099 to such amount considered income.

USE OF THIRD-PARTY ASSET MANAGERS (“TPAMS”)

Some IARs will utilize the services of TPAMs to assist in managing your investments. Your representative can assist you with selecting and monitoring unaffiliated TPAMs offering asset management and other investment advisory services. Such arrangements with TPAMs are structured as either a solicitor arrangement, whereby IFP would solicit clients to the TPAMs in exchange for a fee, without any authority to provide ongoing advice or account management, or as co-advisors, wherein both firms would have authority to provide ongoing advice and/or account management services in exchange for a fee split as negotiated by the respective firms. In situations where IFP/IAR are serving as co-advisors, your IAR is responsible for the initial and ongoing review and is also responsible for maintaining your current information. When serving as a co-advisor, such a referral to such a third-party must be based upon a fiduciary/“Best Interest” determination, predicated upon reasonable due diligence, which supports the idea that the use of a third party would be in the best interest of you, the client. In such cases, your IAR assists you with identifying your risk tolerance, investment objectives, implementation strategies, etc. He or she will then recommend asset managers geared toward your stated investment objectives and risk tolerance. You will enter into an agreement directly with the TPAM.

Your IAR is available to answer questions you may have regarding your account and act as the communication conduit between you and the TPAM. Your IAR will be available to review the account(s) with you to determine if the TPAM is continuing to meet your investment objectives. Generally, TPAMs will exercise discretionary authority to determine the securities to be purchased and sold for you. Neither IFP, nor your IAR, has discretionary trading authority with respect to your account with the TPAMs(s) and are not responsible for investment selection or trade implementation in your accounts.

The management fees, methods of calculation, and manner in which the fee is billed/collected varies for each TPAM and are described in the TPAM’s disclosure brochure. When referring you to a TPAM, a portion of your total fee is paid to IFP and varies pursuant to the agreement between IFP and the TPAM. Various asset managers will negotiate the fees charged for management services with you (which are disclosed in the service agreement executed between Client and the TPAM.

IFP’s portion of the fee received is disclosed and is negotiable as well, depending on the agreement between IFP and the TPAM. Client should be aware that although this fee does not appear to be a direct cost to Client, the TPAM takes this fee into consideration when determining the amount of fee that they charge to you, the client. In some cases, this compensation will be more or less than if the client paid separately for the TPAM’s investment advice, brokerage and other services, and will vary depending on the investment advisory program or services offered by the TPAM. If you engage a TPAM, you should read a copy of their ADVII/Brochure for a description of their business, fees, conflicts-of-interests, etc.

All fees are calculated and charged by the TPAM, which is responsible for paying IFP’s portion of the fee to IFP. TPAMs generally have account minimum requirements that will vary from manager-to-manager. A complete description of the TPAM’s services, fee schedules and account minimums will be disclosed in the TPAM’s disclosure brochure or Wrap Fee brochure that must be provided to Client at the time Client signs an agreement for services and the account is established. Client reports will depend upon the TPAM.

FINANCIAL PLANNING AND CONSULTING FEES

Fee arrangements are documented on the Financial Planning Services Agreement and include one or more of the following:

HOURLY FEES – Some IARs charge an hourly fee for financial planning and consultancy services. The amount of the hourly fee is set by each IAR and is described in the Financial Planning Services Agreement signed by you. The maximum hourly fee is \$500 per hour.

FLAT FEES – Some IARs charge a fixed fee for specific financial planning and consultancy services. The total financial planning fee will be determined based upon the nature and complexity of the financial planning services

provided to you. Fees charged for financial planning services on a fixed basis generally range from as little as \$1,000 to as much as \$25,000¹¹

ONGOING MONTHLY PLANNING FEES (a/k/a Subscription Fees) – In the case of ongoing monthly planning fees, the fees are charged in arrears and the agreement can be cancelled at any time.

Some IARs will collect a portion of the fee upfront with the remaining portion due upon the delivery of the financial plan to you. However, financial planning fee payments will not exceed \$1,200 in advance for development of a financial plan that will not be completed within six months. You can authorize fee payment from either an IFP brokerage account, an IFP managed account or from your checking or savings account to pay for financial planning services. The IFP brokerage account or the IFP management account used for debiting generally must be a non-qualified account on a platform approved for fee-debiting. You can also choose to pay the financial planning fee by debit or credit card. You also have the option to choose to renew your contract on an annual basis which is represented on the Financial Planning & Consultancy Services Agreement.

Financial planning fees described above do not include the fees you will incur for other professionals (e.g., personal attorney, independent Investment Adviser, or accountant) in connection with the financial planning process.

You should understand that the financial planning fees charged to you are higher or lower than the fees charged by other investment advisers for similar services. You should consider the level and complexity of your personal circumstances, financial situation and the services that will be provided, the scope of the engagement, your gross income, the experience and standard fees charged by your IAR providing the services, and the nature and total dollar asset value of the assets upon which services will be provided.

RETIREMENT PLAN INVESTMENT ADVISORY FEES

Fees for retirement plan services are negotiated prior to the signing of the appropriate Retirement Plan Agreement, which includes the negotiated fee. When fees are paid by the Sponsor, fees will be charged as an asset-based fee or as a flat fee. Some advisors will charge a flat minimum fee and then an asset-based fee once the minimum fee is surpassed.

Unlike the general billing approach, Plans are billed differently. When IFP does the AUM billing calculation for retirement Plans, IFP do not use average daily balance as IFP does not have the information or calculation since IFP and its custodians do not have custody the assets in the same manner. Such Plans use their own custodians, TPAs and/or recordkeepers. That is why we are relegated to a balance at a point in time for the foundation of the calculation formula. That being said, when billed as an asset-based fee in advance, fees will be based on the value of the Plan assets at the beginning of the current period. When billed in arrears, fees will be based on the value of Plan assets at the end of the period. When you engage IFP in mid-quarter the advisory fee will be prorated and calculated on the amount of days left in the billing cycle.

IFP's fees vary depending upon plan asset levels, participant service complexities and the number of advisory services agreed upon, but generally do not exceed 2% of plan assets if a percentage formula is used. Flat fees may range from \$2,500 annually for the small plan market up to \$250,000 in the large plan market, especially if extenuating circumstances exist. It is common for Plan Sponsors to select their investment adviser only after soliciting competitive bids from multiple advisors or service providers to document adherence with ERISA's mandate to Plan fiduciaries, including the fairness and reasonableness of fees.

When fees are calculated and billed to the Plan Sponsor by IFP, fees may be charged as an asset-based fee or as a flat fee. Some advisors will charge a flat minimum fee and then an asset-based fee once the minimum fee is surpassed. Fees can be calculated, billed to and pulled from Plan assets by a Third-Party Administrator ("TPA"), Recordkeeper or a Qualified Custodian based on your instruction. In those cases where fees are paid from Plan assets in which the Sponsor agrees to direct the Recordkeeper to calculate the fee and to pay IFP, the agreement between the Sponsor and Recordkeeper, not IFP, will determine how the fee is calculated, frequency and timing method.

¹¹ Plans priced at the upper end of this range would be for Ultra High Net Worth individuals or businesses with complex planning needs.

You will incur fees and charges imposed by third parties other than IFP and IAR in connection with services provided by IFP. These third-party fees include, but are not limited to, fund or annuity subaccount management fees, 12b-1 fees and administrative servicing fees, plan recordkeeping and other service provider fees. Further information regarding charges and fees assessed by a mutual fund or annuity are available in the appropriate prospectus. If you engage IFP and IAR to provide ongoing investment recommendations to the Plan regarding the investment options (e.g., mutual funds or collective investment funds) to be made available to Plan participants, you should understand that there generally will be two layers of fees with respect to such assets. The Plan will pay an advisory fee to the fund manager and other expenses as a shareholder of the fund. You also will pay IFP the fee as agreed to in the appropriate agreement for the investment advisory or management services. Therefore, Client could generally avoid the second layer of fees by not using the advisory services of IFP and IAR and by making your own decisions regarding the investment. If a Plan makes available a variable annuity as an investment option, there are mortality expenses and administrative charges, fees for additional riders on the contract and charges for excessive transfers within a calendar year imposed by the variable annuity sponsor. If a Plan makes available a pooled guaranteed investment contract ("GIC") fund, there are investment management and administrative fees associated with the pooled GIC fund.

Some IARs of IFP work with employer sponsored retirement plan participants whose Plan offers a feature known as a "Self-Directed Brokerage Account" ("SDBA"). This feature can be branded differently by various custodians (e.g., Schwab's "Personal Choice Retirement Account" ("PCRA")), but basic functionality is the similar. In these situations, a participant directs the retirement Plan's core recordkeeper to move some allowable portion of their account, as set forth by the Plan document or by the recordkeeper, from the core custodian to an offered brokerage account. While the account is still considered a Plan asset, it can access a broader array of investment choices than what is offered by the Plan's core menu. In addition, it allows the participant to engage a personal investment adviser to help them manage the account. Some SDBAs will also facilitate individual account advisory fee calculations extending to the withdrawal and forwarding of the payments to IFP for the benefit of the servicing IAR. In those situations where that fee facilitation is not available, IFP can bill the participant directly or pull the fee from another non-retirement account the participant may have established at IFP. Fees would follow IFP's normal guidelines for investment advisory services.

Some IARs of IFP work with tax exempt programs and provides services to employees of public-school systems and tax-exempt organizations that qualify under Section 501(c)(3) of the Internal Revenue Code. Services are usually provided through the organization's retirement accounts held in an Optional Retirement Plan (ORP) or a Self-Directed Brokerage Accounts also known as a 401(a), 403(b) and 457 accounts. IARs commonly use TIAA or Fidelity TEM to provide these services. Both programs apply a maximum fee allowed to be charged;

- The maximum allowable fee that can be charged will not exceed 2.50% of assets under management on an annual basis for Fidelity TEM;
- The maximum allowable fee that can be charged will not exceed 2.00% of assets under management on an annual basis for TIAA;

FEES IN GENERAL

You should be aware that other investment advisers will charge lower fees for similar investment advisory services. You could also invest on your own in a security or a portfolio of securities directly without being charged for investment advisory services. You should be aware that investment advisory program fees charged can be higher or lower than if you elected to execute transactions on a commission basis for each transaction in a commission-based brokerage account.

IARs have the availability to utilize mutual funds that offer various shares, including those within the same mutual fund. Varying share classes include, but are not limited to, shares designated as Class "A" Shares, Class "B" Shares, Class "C" Shares, Class "R" Shares and Class "I" Shares. Generally, I Shares are reserved for institutional investors and therefore are not always available for your account. As a result of the different expenses of the mutual fund share classes, it is generally more expensive for you to own Class A Shares than Class I Shares (or other share classes). Generally, you do pay a sales load for Class A Share mutual fund transactions (paid from a reduction from your initial investment amount, unless it is "load-waived"), and generally pay transaction charges for Class I Share mutual fund transactions. You can avoid or lower the transaction charge by purchasing a Class A Share mutual fund in a non-retirement account by increasing your

purchase amount to take advantage of “Break Points”¹², however the share class can be more expensive to you over time because of the ongoing 12b-1 fee. You pay a higher transaction charge for a Class I Share; however, the share class can be less expensive to you over time. You should discuss and understand these additional indirect expenses borne as a result of the mutual fund fees.

You should consider the value of these investment advisory services when making such comparisons. The combination of custodial, investment advisory and brokerage services provided may not be available separately or would require maintaining multiple accounts, documentation, and fees. You should also consider the amount of anticipated volume of trading activity when selecting among the investment advisory programs and assessing the overall cost. Investment advisory programs typically take into consideration certain volume of trading activity and therefore, under particular circumstances, prolonged periods of inactivity or asset allocations with significant fixed income or cash allocations sometimes result in higher investment advisory fees being paid over time than if the client had been charged a commission separately for each transaction. Also, if your IAR is not actively managing certain assets (e.g., money market balances or “cash equivalents”, and such balances generally remain the same, relatively stable in amount and/or “uninvested” in the market, you should request your IAR exclude them from billing, so that only actively advised/managed investments/assets are subject to investment advisory fee billing.

IFP Securities is eligible to receive compensation (\$5 per account) for Health Savings Accounts (“HSAs”) opened by either IPF Securities or IPF Advisors, which are custodied with Pershing, LLC. This fee will start to accrue and be paid once the number of HSA accounts opened at Pershing reaches 500 accounts. Thereafter, IFP will receive such fees. Although your FP does not share in this fee arrangement between IFP and Pershing, this presents a conflict of interest as IFP Securities and IPF Advisors receive an incentive based upon the number of accounts opened with Pershing, which could impact the recommendation to open an HSA account. Also, it could impact the likelihood, when opening an HSA account, to use Pershing rather than another custodian.

TERMINATION

Termination and refund terms and conditions are outlined in your investment advisory agreement with IFP. TPAMs and other program sponsor(s) selected by IFP for you have their own policies for account terminations and refunds.

IFP typically has no control over any contractual provisions imposed by TPAMs.

Should you terminate your relationship with IFP or your IAR prior to the end of the billing period, fee refunds will be determined on a *pro rata* basis using the number of days services are provided during the final period. Fee refunds calculated to be less than \$25 generally will not be processed. An advisor is also permitted to waive all of the fees to be charged to you as a benefit to you, in lieu of prorating the fee upon termination.

The Financial Planning Services Agreement for financial planning services can be terminated at any time by providing written notice to the appropriate parties. Financial planning services will be terminated upon receipt of such notice without penalty. However, you will be charged a *pro-rata* portion for financial planning services rendered up to the date of termination of the Agreement. After receiving notice of termination, IFP will promptly send the *pro-rata* refund of any financial planning fees paid in advance to you.

¹² See the applicable mutual fund prospectus for a schedule of such fee reductions/eliminations, otherwise known as the Break Point schedule. Also, generally, commission-based securities, including mutual fund classes with "Sales Loads," are not permitted or appropriate in an investment advisory accounts, unless the load is waived and an adviser-class share is otherwise unavailable, and/or a load-waived share is cheaper and just as effective as a comparable adviser-class share. Generally, adviser-class shares should be used. However, any exceptions to this policy must be documented by the IAR and IFP designated principals in terms of why such an approach is the best interest of the client. For example, in some cases, large transactions in A Shares, e.g., that result in no load being charged (top breakpoint bracket for may be cheaper than adviser-class shares when one analyzes the mutual fund's internal management fees. In that case, the IAR could "make the case" that such shares are in the best interest of the client, and such client/fund-specific comparison must be analyzed by the IAR on a case-by-case basis, and such analysis should be provided to the IFP New Accounts Supervisors and the Transaction Supervisors. For non-discretionary investment advice, you are encouraged to always ask your IAR for a written justification about why a particular portfolio strategy and investment recommendation is in your best interest.

ITEM 6. PERFORMANCE-BASED FEES AND SIDE-BY-SIDE MANAGEMENT

Performance-based fees are defined as fees based on a share of capital gains or on capital appreciation of the assets held in a client's account. IFP does not charge or accept performance-based fees. It also does not advise private equity funds, hedge funds or liquidity funds or make allocation decisions for such private investment vehicles.

ITEM 7. TYPES OF CLIENTS

IFP provides investment advisory services to the following types of clients:

- Individuals, including High Net worth Individuals
- Collective Investment Trusts or CITs (as a sub-adviser)
- Pension and Profit-Sharing Plans
- Trust, Estates, or Charitable Organizations
- Corporations, Partnerships and other businesses not listed above

While IFP does not require a minimum account size, we suggest that you invest at least \$100,000 in order for an investment advisory account. For smaller accounts, IFP suggests that either a brokerage account or an account with automated investment tools/Robo advice may be more appropriate, economically efficient and desirable customer experience, particularly when any such investment tools/Robo advice is accompanied by some level of "overlay" advice or management by your IAR.

IFP reserves the right to apply a higher account size in consideration of your ability to open and continue to maintain an account. Some IARs, and programs used by IARs, impose higher account minimums and you should consult with your IAR to determine the required account minimum.

ITEM 8. METHODS OF ANALYSIS, INVESTMENT STRATEGIES AND RISK OF LOSS

IARs use a variety of methods to analyze a client's situation as well as economic factors to develop investment advice and recommendations. IARs typically use one or more of the following methods of analysis to formulate investment advice or manage a client's account:

- **CHARTING:** In this type of technical analysis, the IAR reviews charts of market and security activity in an attempt to identify when the market is moving up or down and to predict how long the trend will last and when that trend might reverse.
- **FUNDAMENTAL ANALYSIS:** IARs evaluate economic and financial factors to determine if a security is underpriced, overpriced or fairly priced. Fundamental analysis does not attempt to anticipate market movements. This presents a potential risk, as the price of a security can move up or down along with the overall market regardless of the economic and financial factors considered in evaluating the stock.
- **TECHNICAL ANALYSIS:** IARs analyze past market movements and apply that analysis to the present in an attempt to recognize recurring patterns of investor behavior and potentially predict future price movement. Technical analysis does not consider the underlying financial condition of a company. This presents a risk in against the overall market to predict the price movement of the security.
- **QUANTITATIVE ANALYSIS:** IARs use mathematical models to obtain more accurate measurements of a company's quantifiable data, such as the value of some share price or earnings per share and predict changes

to that data. A risk in using quantitative analysis is that the models used will be based on assumptions that prove to be incorrect.

- **QUALITATIVE ANALYSIS:** IARs subjectively evaluate non-quantifiable factors and attempt to potentially predict changes to share price based on that data.
- **CYCLICAL:** This method of analysis focuses on the investments sensitive to business cycles and whose performance is strongly tied to the overall economy. For example, cyclical companies tend to make products or provide services that are in lower demand during down turns in the economy and higher demand during upswings. Examples include the automobile, steel and the housing industries. The stock price of a cyclical company will often rise just before an economic upturn begins and fall just before a downturn begins. Investors in cyclical stocks try to make the largest gains by buying the stock at the bottom of a business cycle, just before a turnaround begins.
- **ASSET ALLOCATION:** IARs attempt to identify an appropriate ratio of asset classes that are consistent with the client's investment objectives and risk tolerance.

INVESTMENT STRATEGIES

When implementing investment advice to you, our IARs typically employ the following investment strategies:

- Long-Term Purchases - Securities held at least a year.
- Short-Term Purchases - Securities sold within a year.
- Trading - Securities sold within 30 days.
- Short Sales - Borrowing securities in anticipation of a price decline and returning an equal number of securities at some future time.
- Margin Transactions - Investor pays for part of the purchase and borrows the rest from a brokerage firm; for example, investor buys \$5,000 worth of stock in a margin account by paying for \$2,500 and borrowing \$2,500 from a brokerage firm. You cannot borrow stock from Advisor.
- Option Writing - Including covered options, uncovered options or spreading strategies. Note: options are contracts giving the purchaser the right to buy or sell a security, such as stocks, at a fixed price within a specific period of time.
- Strategic/Tactical Asset Allocation - Asset allocation is the combination of several different types of investments; typically, stocks, bonds and cash equivalents among various asset classes so your investments are diversified. The objective of asset allocation is to develop an investment plan that will help investors reach your financial goals, while holding down your risks.
- Strategic Timing - Strategic timing is designed to reduce risks in bear markets (when markets are decreasing in value). This is a trend-following strategy that involves holding total cash positions during bear markets and fully invested positions during bull markets.

RISKS OF LOSS

GENERALLY

Investing in securities involves a risk of loss that you should be prepared to bear, including loss of your original principal. However, you should be aware that past performance of any security is not necessarily indicative of future results. Therefore, you should not assume that future performance of a specific investment or investment strategy will be profitable. We do not provide representation or guarantee that your goals will be achieved. Investing in securities involves risk of loss. Further, depending on the different types of investments, there are varying degrees of risk:

All investments involve a risk of loss of your original principal. There are several factors that impact the type and magnitude of risk, including market risk; product and issuer risk; interest-rate risk; call/redemption risk; reinvestment risk; including counterparty credit risk; business risk; currency risk;

political risk; legal risk; regulatory risk; solvency risk; etc. You should evaluate what your risk tolerance is in order to develop an investment strategy and/or financial plan that is appropriate in light of your investment objectives, time horizon, liquidity and cash flow needs, etc. The risks specified below are a partial list of risks, but are intended to provide “inquiry notice” for you to discuss all material risks more fully with your IAR.

- **MARKET RISK.** Either the market, or the value of an individual company, goes down, resulting in a decrease in the value of client investments. This is often in reaction to tangible and intangible events and conditions. Political, economic and/or social conditions will trigger market events. This is referred to as systemic risk.
 - **MARKET VOLATILITY:** Future price movements are inevitable. While we seek to effectively project the long-term value of investments, we may not be able to do so, and prices may change in both a material and negative way.
 - **INVESTMENT ACTIVITIES:** The performance of any investment is subject to incorrect and unforeseen, negative changes in value. Several factors may impact value such as economic, political, competitive, technological and other conditions (including acts of terrorism and war). The impacts may be more limited to a particular investment or may have a broader impact. The securities markets may be volatile, which may adversely affect our ability to achieve positive returns.
 - **ACCURACY OF PUBLIC INFORMATION:** We conduct research and collect information from various public sources, and there is a risk that those public sources may be wrong. We cannot assess the completeness or accuracy of such information.
 - **VALUATION OF INVESTMENTS:** While we endeavor to assess the proper values of investment, our assumptions and conclusions may be significantly different than the market valuation at any point in time.
 - **MARKET OR INTEREST RATE RISK:** The price of most fixed income securities tends to move in the opposite direction of the change in interest rates. If we sell a fixed income security before the maturity date, because of the inverse correlation between interest rates and price, an increase in interest rates would probably result in a loss of principal.
 - **INFLATION RISK:** Inflation risk results from the variation in the value of cash flows from a security due to inflation, which reduces the purchasing power of the cash flow.
 - **CURRENCY RISK:** Overseas investments are subject to fluctuations in the value of the dollar against the currency of the investment’s originating country. This is also referred to as exchange rate risk.

- **PRODUCT-SPECIFIC RISKS**
 - **LIQUIDITY RISK**

Investments may not be able to be readily converted into cash. This risk is much more pronounced with Alternative Investment such a Privately Placed Securities, Internal Funds, Structured Products, Thinly Traded/OTC securities, etc.
 - **EQUITY (STOCK) MARKET RISK**

Common stocks are susceptible to fluctuations and to volatile increases/decreases in value as your issuers’ confidence in or perceptions of the market change. Investors holding common stock (or

common stock equivalents) of any issuer are generally exposed to greater risk than if they hold preferred stock or debt obligations of the issuer.

- **COMPANY RISK**

There is always a certain level of company or industry specific risk when investing in stock positions. This is referred to as unsystematic risk and can be reduced through appropriate diversification. There is the risk that a company can perform poorly or that its value can be reduced based on factors specific to it or its industry (e.g., employee strike, unfavorable media attention).

- **OPTIONS RISK**

Options on securities are subject to greater fluctuations in value than investing in the underlying securities. Purchasing and writing put or call options are highly specialized activities and involve greater than ordinary investment risk. Puts and calls are the right to sell or buy a specified amount of an underlying asset at a set price within a set time.

- Protective Options (Call Writing, Protective Puts, etc.) - Clients should understand they would have a tax obligation at year-end.

- **FIXED INCOME RISK**

Investing in bonds involves the risk that the issuer will default on the bond and be unable to make payments. In addition, individuals depending on set amounts of periodically paid income face the risk that inflation will erode your spending power. Fixed income investors receive set, regular payments that face the same inflation risk.

- **INVESTMENT COMPANY, INSURANCE AND OTHER PUBLICLY REGISTERED POOLED FUNDS, GENERALLY**

Overall Fund Risk

- Clients need to remember that past performance is no guarantee of future results. All funds carry some level of risk. You may lose some or all of the money you invest, including your principal, because the securities held by a fund goes up and down in value. Dividend or interest payments may also fluctuate, or stop completely, as market conditions change.
- Before you invest, be sure to read a fund's prospectus and shareholder reports to learn about its investment strategy and the potential risks. Funds with higher rates of return may take risks that are beyond your comfort level and are inconsistent with your financial goals.
- While past performance does not necessarily predict future returns, it can tell you how volatile (or stable) a fund has been over a period of time. Generally, the more volatile a fund, the higher the investment risk. If you'll need your money to meet a financial goal in the near-term, you probably can't afford the risk of investing in a fund with a volatile history because you will not have enough time to "ride out" any declines in the stock market.

ETF AND MUTUAL FUND RISK

Exchange traded fund ("ETF") and mutual fund investments bear additional expenses based on a pro rata share of operating expenses, including potential duplication of management fees. The risk of owning an ETF or mutual fund generally reflects the risks of owning the underlying securities held by the ETF or mutual fund. You also incur brokerage costs when purchasing ETFs.

Mutual Funds Risk

Mutual funds can offer the advantages of diversification and professional management. However, as with other investment choices, investing in mutual funds involves risk and fees and taxes that will diminish a fund's returns. Mutual funds also have features that are disadvantageous, such as:

- *Costs despite Negative Returns:* Clients must pay sales charges, annual fees, and other expenses) regardless of how the fund performs. And, depending on the timing of their investment, clients may also have to pay taxes on any capital gains distribution they receive — even if the fund proceeded to perform poorly after they bought shares. Such distribution can occur even if the distribution remains in the accounts, and is not actually physically distributed to the client.
- *Lack of Control:* Investors typically cannot ascertain the exact make-up of a fund's portfolio at any given time, nor can they directly influence which securities the fund manager buys and sells or the timing of those trades.
- *Price Uncertainty:* with an individual stock, you can obtain real-time (or close to real-time) pricing information with relative ease by checking financial Websites or by calling your IAR. You can also monitor how a stock's price changes from hour to hour. But with a mutual fund, the price you purchase or redeem shares for will typically depend on the fund's net asset value ("NAV"), which is generally an end-of-day price, which the fund might not calculate until many hours after you have placed your order. In general, mutual funds must calculate their NAV at least once every business day, typically after the major U.S. exchanges close.

The following is a list of some general risks associated with investing in mutual funds:

- *Country Risk:* The possibility that political events (e.g., war, national elections, etc.), financial problems (rising inflation; government default), or natural disasters (an earthquake; a poor harvest) will weaken a country's economy and cause investments in that country to decline.
- *Currency Risk:* The possibility that returns could be reduced for Americans investing in foreign securities because of a rise in the value of the U.S. dollar against foreign currencies (also called exchange-rate risk).
- *Income Risk:* The possibility that a fixed-income fund's dividends will decline as a result of falling overall interest rates.
- *Industry Risk:* The possibility that a group of stocks in a single industry will decline in price due to developments in that industry.
- *Inflation Risk:* The possibility that increases in the cost of living will reduce or eliminate a fund's real inflation-adjusted returns.
- *Manager Risk:* The possibility that an actively managed mutual fund's Investment Adviser will fail to execute the fund's investment strategy effectively, resulting in the failure of stated objectives.
- *Market Risk:* The possibility that stock fund or bond fund prices overall will decline over short or even extended periods. Stock and bond markets tend to move in cycles, with periods when prices rise and other periods when prices fall.
- *Principal Risk:* The possibility that an investment will go down in value, or "lose money," from the original or invested amount.

- **BOND FUND RISK**

Bond funds generally have higher risks than money market funds, largely because they typically pursue strategies aimed at producing higher yields than the risks associated with bond funds. Risks include:

- *Call Risk*: The possibility that falling interest rates will cause a bond issuer to redeem—or call—its high-yielding bond before the bond's maturity date.
- *Credit Risk*: The possibility that companies or other issuers whose bonds are owned by the fund may fail to pay their debts (including the debt owed to holders of their bonds). Credit risk, however, is less of a factor for bond funds that invest in insured bonds or U.S. Treasury bonds. By contrast, those funds that invest in the bonds of companies with poor credit ratings generally will be subject to higher risk.
- *Interest Rate Risk*: The risk that the market value of the bonds will go down when interest rates go up. Because of this, you can lose money in any bond fund, including those that invest only in insured bonds or Treasury bonds.
- *Prepayment Risk*: The chance that a bond will be paid off early. For example, if interest rates fall, a bond issuer may decide to pay off (or "retire") its debt and issue new bonds that pay a lower rate. When this happens, the fund may not be able to reinvest the proceeds in an investment with as high a return or yield.

- **FIXED INCOME CALL OPTION RISK**

Many fixed income securities can be "called" or retired by the issuer. That creates a risk of negatively impacting the projected cash flow, reduced capital appreciation potential and reinvestment risk due to the lower interest rates then being experienced.

- **STOCK FUND RISK**

Although a stock fund's value can rise and fall quickly over the short-term, historically stocks have performed better over the long-term than other types of investments — including corporate bonds, government bonds and treasury securities.

Overall, "market risk" poses the greatest potential danger for investors in stocks funds. Stock prices can fluctuate for a broad variety of reasons, such as the overall strength of the economy or demand for particular products or services.

Not all stock funds are the same. For example:

- Growth funds focus on stocks that may not pay a regular dividend, but have the potential for large capital gains.
- Income funds invest in stocks that pay regular dividends.
- Index funds aim to achieve the same return as a particular market index, such as the S&P 500 Composite Stock Price Index, by investing in all — or perhaps a representative sample — of the companies included in an index.
- Sector funds may specialize in a particular industry segment, such as technology or consumer products stocks.

○ **MANAGEMENT RISK**

Your investments also vary with the success and failure of our investment strategies, research, analysis and determination of portfolio securities. If any particular product's/issuer's portfolio manager is ineffective or sub-optimal, the performance of the instrument/investment will not produce the expected returns and the value of your investments will decrease.

○ **INSURANCE SECURITIES RISKS**

The rate of return on variable insurance products is not stable, but varies with the stock, bond and money market subaccounts that you choose as investment options. There is no guarantee that you will earn any return on your investment and there is a risk that you will lose money. Before you consider purchasing a variable product, make sure you fully understand all of its terms. Carefully read the prospectus. Some of the major risks include:

Liquidity and Early Withdrawal Risk: There may be a surrender charges for withdrawals within a specified period, which can be as long as six to eight years (and up to 15 years for Equity Indexes Annuities). Any withdrawals before a client reaches the age of 59 ½ are generally subject to a 10 percent income tax penalty in addition to any gain being taxed as ordinary income.

Sales and Surrender Charges: Asset-based sales charges or surrender charges exist, but normally decline and eventually are eliminated the longer you hold your shares. For example, a surrender charge could start at 7 percent in the first year and decline by 1 percent per year until it reaches zero. That is one reason why variable insurance products are generally not suitable for short-term time horizons.

Fees and Expenses – There are a variety of fees and expenses that can reach 2% and more such as:

- Mortality and expense risk charges;
- Administrative fees;
- Underlying fund expenses; and
- Charges for any special features or riders.

Bonus Credits: Some products offer bonus credits that can add a specified percentage to the amount invested ranging from 1 percent to 5 percent for each premium payment. Bonus credits, however, are usually not free. In order to fund them, insurance companies typically impose high mortality and expense charges and lengthy surrender charge periods.

Guarantees: Insurance companies provide a number of specific guarantees. For example, they may guarantee a death benefit or an annuity payout option that can provide income for life. These guarantees are only as good as the insurance company that offers them.

Market Risk: The possibility exists that stock fund or bond fund prices overall will decline over short or even extended periods. Stock and bond markets tend to move in cycles, with periods when prices rise and other periods when prices fall.

Principal Risk: The possibility that an investment will go down in value, or "lose money," from the original or invested amount. This risk may entail a partial or complete loss of principal.

○ PRIVATE PLACEMENTS AND OTHER ALTERNATIVE INVESTMENTS RISK

These investments have a high degree of risk. It is possible for you to experience total loss or a substantial loss of investment. In the absence of a public market for these securities, there is lack of liquidity and an expected investment time horizon usually in excess of five years. There are no guarantees that you will receive a distribution and payments of distributions will decrease or diminish your interest.

Such products are generally speculative investments, which means they have a very high risk, and should therefore not be the product used by investors who have a more moderate risk tolerance in the same account. However, it is conceivable, if the customer consents and agrees with a different investment objective for certain investments than the investment objective generally agreed upon in the Investor Policy Statement, then investments that represent a very small percentage of the overall portfolio could be used in a limited fashion, provided they are only used a non-discretionary basis, and such riskier investments are assigned to a separate account that reflects that investment objective.

Investing in alternative investments are not suitable for all clients, and intended for experienced and sophisticated investors who are willing to bear the high economic risks of the investment, which can include:

- Loss of all or a substantial portion of the investment due to leveraging, short-selling or other speculative investment practices;
- Lack of liquidity in that there may be no secondary market for the securities and none is expected to develop;
- Volatility of returns;
- Restrictions on selling/transferring the securities (*no market permitted unless or until registered*);
- Absence of information regarding valuations and pricing;
- Delays in tax reporting; and
- Less regulation and higher fees than mutual funds.

IFP disallows IARs to exercise discretion over such investments. May advise, but not engage in transaction without client application/subscription.

○ STRUCTURED PRODUCTS RISK

An investor in a structured product never has a claim on the underlying investment, whether a security, zero coupon bond, or option. This could cause little or no secondary market for the securities and information regarding independent market pricing for the securities will be limited.

Structured products are complex investments that are not suitable for all investors. Structured products are **unsecured** obligations of the issuer that pay a return based on an underlying asset.

- Structured products are the obligation of the issuer and the ability to provide a return is based on the credit worthiness of the issuer. This means that there is credit risk with the product and it may provide no returns, including **total loss of principal** if the issuer is not able to pay its obligations.
- Any principal protection (whether full or partial) stated in the prospectus is based solely on the **credit worthiness of the issuer and only if held to maturity**.
- Structured products may have limited or no trading on secondary markets. This means the position may have to be held until maturity. If there is a market for the structured product it is likely the product would have to be sold for lower than the principal amount invested.

- The underlying asset or index may be proprietary to the issuer. This adds a layer of complexity as you must understand how the index works to understand how returns will be calculated.
- Tax treatment on certain structured products may not be the same as more traditional investments. You may have to pay income tax on increases even if no payment is received, this is typically referred to as “phantom income”. Please consult with your personal tax advisor regarding taxation of structured products.
- Certain structured products provide FDIC insurance. This FDIC insurance is only applicable to the principal amount invested and not to any gains or income payments. This insurance is available up to the applicable federal amount. It does not protect against negative performance of the asset. It will only apply in the case of insolvency according to the process and procedures of the Federal Deposit Insurance Corporation. More information can be found on <https://www.fdic.gov/>.
- Certain structured products will have a call feature, allowing the issuer to “call” the investment back from the investor. The terms of any call feature should be fully understood and can be found in the prospectus.
- Early termination provisions can be found in the prospectus if they apply. These features allow the issuer to end the investment early under specified circumstances. This usually will lead to a lower payout than what would be received at maturity or in the case of a call provision.

○ **INTERVAL FUNDS**

There are special risks associated with interval funds, including:

- Shares of the Interval Fund are unlikely to be listed on a public exchange;
- No secondary market is expected to develop for the Interval Fund’s shares;
- Liquidity for the Interval Fund’s shares will be provided only through periodic offers by the Interval Fund (e.g., quarterly repurchase offers);
- There is no guarantee that an investor will be able to sell all the shares that the investor desires to sell in the repurchase offer;
- An investor should consider an investment in the Interval Fund to be of limited liquidity;
- Investing in the Interval Fund’s shares may be speculative and involves a high degree of risk; and
- As with all securities, an investor should carefully read the Prospectus prior to investing, which, in the case of Interval Funds, may include particular and significant risks related to leverage.

○ **INVESTMENTS IN NON-US SECURITIES**

From time to time, we may invest and trade a portion of its assets into non-U.S. securities and other assets, which will give rise to risks relating to political, social, legal, currency, regulatory and economic developments abroad. Different laws, regulation, and market practices may also increase the risk.

● **MISCELLANEOUS RISKS**

There are too many risks to enumerate specifically. Thus, the foregoing risks do not purport to be a complete compendium of the risks of any particular investment; they are general risks that should guide your initial evaluation of any prospective investment. You are encouraged to read the prospectus and offering documents, as applicable, for any prospective and current investment, and discuss them with your IAR vis-à-vis your investment objectives, risk tolerance, liquidity needs, investment time horizon, risk/reward preferences, etc.

ITEM 9. DISCIPLINARY INFORMATION

IFP is required to disclose disciplinary actions against the firm. The detailed information for the actions below can also be found on IFP's Form ADV Part 1 on the SEC's website at www.sec.gov.

IFP discloses the following disciplinary information:

1. On January 13, of 2012, IFP agreed to and signed a Stipulation and Consent Order with the State of Florida Office of Financial Regulation that IFP and two of its IARs engaged in investment advisory business in the state of Florida without being properly registered. IFP paid a \$20,000 fine and also paid \$10,000 fines on behalf of each IAR.
2. On October 7, 2013, IFP agreed to and paid an Administrative Penalty in the amount of \$2,500 to the State of California, Department of Business Oversight for failing to properly register an IAR in the State of California.
3. On December 3, 2013, IFP agreed to and signed a Cease-and-Desist Order with the State of Oregon, Department of Consumer and Business Services, Division of Finance and Corporate Securities for failing to properly license an IAR who had a place of business in the state of Oregon. IFP paid a \$3,600 fine.

ITEM 10. OTHER FINANCIAL INDUSTRY ACTIVITIES AND AFFILIATIONS

AFFILIATION WITH IFP SECURITIES, LLC

IFP is under common ownership with a registered broker-dealer, IFP Securities, LLC. IFP Securities, LLC and IFP Advisors, LLC are owned by IFP Group, LLC. IAR's acting in their separate capacities as Registered Representatives of IFP Securities, LLC. sell, for commissions, general securities products including but not limited to stocks, bonds, mutual funds, exchange-traded funds, alternative investments, variable annuity and variable life products to you. As such, IAR's have the availability to suggest that you implement investment advice by purchasing securities products through a commission based IFP account in addition to an advisory account. In the event that you elect to purchase these products through IFP Securities, LLC., IFP and your IAR, in the capacity as IFP Registered Representatives, will receive the normal and customary commission compensation in connection with the specific product purchased. This presents a conflict of interest, as it gives your IAR an incentive to recommend investment products on the compensation received, rather than on your needs. You are free to implement investment advice through any broker-dealer or product sponsor you select. However, you should understand that, due to certain regulatory constraints, your IAR must place all purchases and sales of securities products in commission-based brokerage accounts through IFP Securities, LLC or other IFP approved institutions.

For accounts managed by IFP and held and custodied at Pershing, our affiliated broker-dealer, IFP Securities, LLC., will act as the introducing broker for transactions in these accounts and will be paid a ticket charge for each transaction out of your non-wrap accounts. IFP Securities, LLC. essentially pays a portion of each ticket charge to the clearing firm, Pershing, and keeps the remaining portion of the ticket charge paid by you. Although this retained revenue from the ticket charge is not retained by your IAR servicing your account, this is a conflict of interest for IFP because of the additional compensation.

AFFILIATION WITH IFP INSURANCE GROUP, LLC

IFP is under common ownership with IFP Insurance Group, LLC (IFP Insurance Group), a licensed insurance agency. IFP and IFP Insurance Group are owned by IFP Group, LLC. Some IAR's are licensed life insurance agents with IFP Insurance Group and sell insurance products to you. Therefore, your IAR, in the capacity as a licensed life agent, is able to implement

insurance recommendations for you when electing to receive this service. In this event, IAR's, in their separate capacities as licensed insurance agents, will receive separate and typical commission compensation for insurance and/or annuity sales. This presents a conflict of interest, as it gives your IAR an incentive to recommend investment products on the compensation received, rather than on your needs.

UNAFFILIATED INVESTMENT ADVISERS

IFP allows IARs to recommend and select unaffiliated Investment Advisers for you typically referred to as TPAMs. Whenever another Investment Adviser is selected to manage all or a portion of the client's assets, the outside Investment Adviser will be paid a portion of the fees the Client is charged. IFP and IAR will also receive a portion of the fees you are charged. While IARs endeavor at all times to put your interests first as a part of IFP's fiduciary duty, you should be aware that the receipt of commissions and additional compensation itself creates a conflict of interest and can affect the judgment of IAR when making recommendations. Nevertheless, as noted elsewhere in this Brochure, it is the general policy of IFP to not charge both a commission and an investment advisory fee on the same account, covering the same period of time.

OTHER OUTSIDE BUSINESS ACTIVITIES

Certain IARs have other business activities and offer other professional services, such as tax preparation, accounting, legal, real estate, employee benefits consulting, or have other businesses, that are outside business activities from your registration as an IAR of IFP. Aside from conducting an initial conflicts-of-interest check, such services are outside the scope of IFP's business, and the IARs with such outside business activities are fully responsible for them since they are not activities provided by IFP. IARs engaging in these other outside business activities do so independently of your registration with IFP.

ITEM 11. CODE OF ETHICS, PARTICIPATION IN CLIENT TRANSACTIONS AND PERSONAL TRADING

CODE OF ETHICS

An investment adviser is considered a fiduciary as defined under the Investment Advisers Act of 1940, as amended. As a fiduciary, it is an investment adviser's responsibility to provide fair and full disclosure of all material facts and to act in the best interest of each of our clients. IFP, its employees, and its IARs have a fiduciary duty to all advisory clients. To assist our employees and IARs in meeting these obligations, IFP has adopted standards of business conduct that are outlined in our Code of Ethics. IFP requires its supervised persons to conduct business with integrity and to comply with federal and state securities laws. IFP has established a Code of Ethics which IARs and those people defined as access persons will read and then execute an acknowledgement stating that they understand and agree to comply with IFP's Code of Ethics. The Code of Ethics addresses matters such as the prohibition against trading on the basis of non-public information, Conflicts of Interest, Personal Securities transactions, etc.

PARTICIPATION OR INTEREST IN CLIENT TRANSACTIONS

IARs have the availability to recommend to investment current or prospective clients the purchase or sale of securities in which IFP, its affiliates, the IAR and/or other clients also have a position or interest.

Because the Code of Ethics in some circumstances would permit Employees, IARs and affiliated accounts to invest in the same securities as you, there is a possibility that employees, IARs or affiliated accounts might benefit from market activity in their accounts with a security also held by you.¹³ Therefore, a conflict of interest exists when IFP and its IARs purchase

¹³ IFP's current general policy prohibits trading in the same day as the client in securities (unless mutual funds and certain other securities exempted within the industry standards applicable to Codes of Ethics regulations governing investment advisers), unless, in the case of block transactions, the IAR ensures that he/she places the client's execution price as "preferenced" over the execution price of the IAR. In that way, the IAR may receive an equal price as clients if all clients whose orders were handled by IFP's advisory clearing platform providers (Fidelity, Schwab/TD, SEI and

and sell the same securities owned by you. Trading activity of IARs and employees is reviewed and monitored under the Code of Ethics to help reasonably prevent this conflict of interest in trading between IFP and its clients.

IFP and its IARs have the availability to maintain investment positions in their personal portfolios that are recommended to you. In fact, IFP and its IARs have the choice to take positions or execute transactions for their personal accounts which are materially different than the positions or transactions recommended for you. Employees and IARs are expected to purchase or sell a security for their personal accounts only after trading of that same security has been executed in customer accounts, trade on a different day than executing trades for a client account or aggregate trading system that applies the average price across all trades aggregated.

IFP's you can request a copy of the firm's Code of Ethics by contacting the firm at the address noted on the cover of this brochure. You may also find a copy of the Code of Ethics on our Web Site at <https://ifpartners.com/wp-content/uploads/2021/03/Code-of-Ethics.pdf>

ITEM 12. BROKERAGE PRACTICES

SELECTION OF BROKERS/ DEALERS AND/OR CUSTODIANS

ACCOUNTS ESTABLISHED THROUGH IFP SECURITIES, LLC

If you wish to implement your IAR's advice you are free to select any broker you wish. If you wish to have your IAR implement the advice in your capacity as a registered representative, then IFP's affiliated broker-dealer, IFP Securities, LLC, will provide brokerage services for the accounts held at Pershing, LLC. You do not generally have the option to direct securities brokerage transactions to other broker-dealers or other account custodians.

IFP IARs are RRs of IFP Securities are required to use the services of IFP Securities when acting in their capacity as RR. IFP Securities has a wide range of approved securities products for which it performs due diligence prior to selection. IFP Securities RRs are required to adhere to these products when implementing securities transactions through IFP Securities. Commissions charged for these products can be higher or lower than commissions you can obtain if transactions were implemented through another broker-dealer.

In accounts where IFP Securities acts as broker-dealer for transactions IFP Securities will be paid a ticket charge and/or commission for each transaction. IFP Securities will pay a portion of each ticket charge to the clearing firm, Pershing LLC, and keeps the remaining portion of the ticket charge. IFP Securities also marks up certain other brokerage-related charges and fees that are assessed to all client advisory accounts at Pershing, LLC. The charges and fees that are marked up include, but are not limited to, paper delivery surcharge, fees for client statement and confirmation, clearance and execution fees, outgoing account transfer fees, mandatory reorganization fees, checking account fees, inactive account fees, wire fees, legal transfer fees, bond redemption fees, termination fees, and IRA annual custodial maintenance fees.

IFP participates in Pershing's FUNDVEST[®] ticket charge program. This program offers no-load mutual funds to be purchased for you with no transaction fees. IARs who absorb ticket charges or utilize asset-based pricing with you have access to utilize these NTF Funds.

Pershing/Pershing Advisory Services/PAS), provided all such orders for entire day get filled as the average daily price, or the IAR price is worse than all IFP clients for the entire day. IFP understands each of its advisory clearing platform providers aggregate and allocate orders with each block at average daily price, so there should generally not be a possibility to receive a better price than a client with the same block trade. However, there is a challenge if there are multiple block orders that occur during the same day. This means that if multiple block orders occur within 1 day, the IAR is obligated to consider the execution price of all such client block orders, and the client receives no better price than all clients who received an order execution on a particular day. Considering the difficulties in ensuring such price preference to all clients with multiple block orders, and all such orders received may have disparate prices from one block to another, IFP's policy prohibits IARs from placing their orders same day as a client, unless the foregoing price assurance/leveling can occur. Such exceptions to the general policy of disallowing IAR to input their own orders in the same block with clients would require advance approval/clearance by a registered principal of IFP (Transaction Supervision Team), and if cleared, then IFP and the IAR must ensure after the executions for the entire day, the IAR receives no better price than all client on the respective day. The other condition for placing orders in this way is that the IAR does not have any non-public information.

You can choose to participate in Pershing's Loan Advance program. In this program, Pershing will qualify a client who would benefit from having an alternative for accessing credit for financial needs in the form of a non-purpose loan. IFP receives revenue for your participation in this program. Even though these payments are not shared with your IAR, the receipt of these additional payments create a conflict of interest because of the increased compensation to IFP.

You can choose to loan securities to Pershing by participating in the Fully Paid Lending Program. You will maintain full ownership of the securities on loan and can recall the loan at any time. You will relinquish your right to exercise voting rights while securities are on loan. Loaned securities will not have SPIC coverage however, SIPC coverage applies to the cash collateral received for the loaned securities. You receive a lending fee based on the relative value of the securities loaned and are subject to change. IFP receives revenue from these fees and even though these payments are not shared with your IAR, the receipt of these additional payments create a conflict of interest because of the increased compensation to IFP.

When you establish an account through Pershing, LLC you are required to select a bank sweep option or money market mutual fund in which the cash in your account will be held. The FDIC bank deposit sweep program is the default option for cash contributed to non-entity (individual) accounts and IFP receives more from Pershing for assets held in that sweep program than IFP does for assets placed into a money market fund. Entities are not eligible to participate in the bank deposit sweep program. The bank sweep account will have a yield that will vary based on prevailing interest rates. IFP has the ability to dictate what portion of the yield (interest rate paid) on the bank sweep accounts it will retain. IFP's ability to adjust the yield creates a conflict of interest since the lower the portion of the yield paid to you, the more IFP earns. IARs do not receive any portion of the bank sweep compensation paid to IFP.

In addition to a bank sweep deposit option, IFP makes available a limited number of money market funds that you have the choice to elect to have serve as the cash sweep vehicle for your brokerage account. Pursuant to IFP's clearing agreement with Pershing, Pershing remits to IFP the amount of 12b-1 fees and shareholding servicing fees for money market mutual funds affiliated with or specified by Pershing in amounts set forth in the prospectus or other offering document for such funds. The higher the 12b-1 fees paid by the money market mutual fund, the lower the yield on cash in your account. This revenue sharing creates a conflict of interest as the increased revenue generated from the default money market funds is paid to IFP's affiliated broker dealer – IFP Securities. Because IFP Securities receives and retains these amounts, IFP has an incentive to recommend a brokerage account offering sweep money market funds paying 12b-1 fees, which in turn will negatively impact the amount you will earn on cash in your account. IARs do not receive a portion of the money market compensation paid to IFP. IFP does not make available other share classes of the sweep money market funds, including those that do not pay 12b-1 fees; however, you can choose to purchase other money market funds, including those that do not pay 12b-1 fees, and move assets from the money market fund or bank deposit account that serves as your cash sweep vehicle into such other funds. You are not obligated to maintain assets in the core sweep money market fund or bank deposit sweep account. Cash in your brokerage account will be placed in the sweep option you select by default and remain in that sweep option until the funds are invested elsewhere or you withdraw the cash from your account.

You have the option of utilizing margin on your advisory accounts. A margin account is an account where you borrow funds for the purpose of purchasing additional securities. You will also use a margin account to borrow money to pay for fees associated with your account or to withdraw funds. There are various, heightened risks associated with a margin account than with a "cash" account (wherein no margin credit exists).¹⁴ If you decide to open a margin account, you

14

- **You can lose more funds than you deposit in the margin account.** A decline in the value of securities that are purchased on margin may require you to provide additional funds to the firm that has made the loan to avoid the forced sale of those securities or other securities or assets in your account(s).
- **The firm can force the sale of securities or other assets in your account(s).** If the equity in your account falls below the maintenance margin requirements, or the firm's higher "house" requirements, the firm can sell the securities or other assets in any of your accounts held at the firm to cover the margin deficiency. You also will be responsible for any short fall in the account after such a sale.
- **The firm can sell your securities or other assets without contacting you.** Some investors mistakenly believe that a firm must contact them for a margin call to be valid, and that the firm cannot liquidate securities or other assets in their accounts to meet the call unless the firm has contacted them first. This is not the case. Most firms will attempt to notify their customers of margin calls, but they are not required to do so. However, even if a firm has contacted a customer and provided a specific date by which the customer can meet a margin call, the firm can still take necessary steps to protect its financial interests, including immediately selling the securities without notice to the customer.

should carefully consider that: (i) if you do not have available cash in your account and your account is a margin account, you are borrowing money to purchase securities, pay for fees associated with your account or withdraw funds; and (ii) you are using the securities that you own as collateral. Money borrowed in a margin account is charged an interest rate that is subject to change over time. This interest rate is in addition to other fees associated with your account. IFP retains a portion of the margin interest charged, which is a source of revenue. This compensation represents a conflict of interest as IFP has a financial benefit when you maintain a margin debt balance. This compensation is retained by IFP and is not shared with your IAR. Therefore, your IAR does not have a financial incentive to recommend that you maintain a margin balance. IAR does have a conflict of interest when recommending that you purchase or sell securities using borrowed money. This conflict occurs because your advisory fee is based on the total market value of the securities in your account. If you have a margin debit balance (in other words, you have borrowed and owe money to IFP's clearing firm/platform such as Pershing, Schwab, Fidelity, TD or SEI), your margin debit balance does not reduce the total market value of your account. In fact, since you have borrowed money to purchase additional shares, the total market value of your account will be higher, which results in a higher advisory fee. You should also carefully review the margin disclosure document for additional risks involved in opening a margin account.

ACCOUNTS ESTABLISHED THROUGH INSTITUTIONAL CUSTODIANS

If you contract for IFP's asset management services, only those custodians that have been approved by IFP shall be used. IAR uses third-party institutional custodian ("Institutional Custodians", which are Qualified Custodians as the term is understood per the Investment Advisers Act of 1940, as amended). Institutional Custodians include but are not limited to Schwab/TD Ameritrade, Fidelity and SEI to maintain custody of your assets and to effect trades for your accounts. Client may request that IFP work with additional custodians, but unless such additional custodial relationships are via a custodial arrangement between the TPAM and the custodian directly, then IFP will likely decline the proposed business because working with additional custodians would essentially impair IFP's operational and compliance efficiencies by not channeling its business through its established custodial relationships. Custodians provide IFP with access to your institutional trading and custody services, which are typically not available to retail commission brokerage accounts.

Institutional Custodians offer brokerage services, execution, custody, research, analyses and reports, and access to mutual funds and other investments that otherwise generally available would only be made available to institutional investors. These benefits include a trading platform; receipt of duplicate client confirmations and bundled duplicate statements and/or providing data feeds containing the same information; access to a dedicated trading desk serving program participants exclusively; access to block trading which provides the ability to aggregate securities transactions and then allocate the appropriate shares to client accounts; the ability to have investment advisory fees deducted directly from a client's account; receipt of research and compliance publications and access to certain mutual funds which generally require significantly higher minimum initial investments or that are generally available only to institutional investors.

Custodians have the choice to discount or waive fees they would otherwise charge for some of these services or pay all or a part of the fees of a third-party providing these services to IFP. As a fiduciary, IFP continually seeks to act in its your best interest. IFP's recommendation or requirement that you maintain your assets in accounts at Custodians is based in part on the benefit to IFP of the availability of some of the foregoing products and services and other arrangements and not solely on the nature, cost or quality of custody and brokerage services provided by the Custodians, although the motivation of using these custodians is based upon their platform, scale, size, access the products and services and market presence, which IFP believes is ultimately in your best interest. That being said, there is a conflict of interest insofar as IFP is not generally capable with its existing relationships and resources to establish numerous custodial

-
- **You are not entitled to choose which securities or other assets in your account(s) are liquidated or sold to meet a margin call.** Because the securities are collateral for the margin loan, the firm has the right to decide which security to sell in order to protect its interests.
 - **The firm can increase its "house" maintenance margin requirements at any time and is not required to provide you advance written notice.** These changes in firm policy often take effect immediately and may result in the issuance of a maintenance margin call. Your failure to satisfy the call may cause the member to liquidate or sell securities in your account(s).
 - **You are not entitled to an extension of time on a margin call.** While an extension of time to meet margin requirements may be available to customers under certain conditions, a customer does not have a right to the extension.

relationships with smaller/different custodians than the ones used by IFP.

Institutional Custodians may or may not charge separately for your custody services, and are compensated by account owners through commissions and/or other transaction-related or asset-based fees for securities trades that are executed through the custodian.

IFP's various custodians are all required to seek best execution in terms of how they handle and route orders. They review and publish data on such order routing and execution quality; links to their Best Execution statistic are provided herein under the subsection entitled "Best Execution". While quality of execution at the best price is an important consideration, best execution does not necessarily mean lowest price and it is not the sole consideration. Some custodians will aggregate transactions for a client with other clients to improve the quality of execution. Allocations of the aggregated orders are made under procedures designed to treat all clients fairly. The trading process of any custodian suggested by us must be efficient, seamless and straight forward. Overall custodial support services, trade correction services and statement preparation are some of the other factors we consider when suggesting a custodian.

RESEARCH AND OTHER BENEFITS

The custodians used by IFP make available other products and services that benefit IFP but do not directly benefit your or your accounts. These products and services assist IFP and your IAR in managing and administering your accounts. These include but are not limited to investment research, access to client account data (such as duplicate trade confirmations and account statements), facilitation of trade execution, allocation of aggregated trade orders for multiple client accounts, pricing and other market data, facilitation of payment of our fees from you' accounts, assistance with back-office functions, recordkeeping, and client reporting.

Since Advisors may receive unsolicited or unrequested products and services, IFP receives "soft dollars" in relation to the established practices and resources of its clearing platforms. IFP receives research and other services from its clearing platforms (Pershing, Schwab/TD, Fidelity and Schwab), which are benefits associated with utilizing their platforms generally, and based upon review of such relationships, IFP believes such benefits comply with the safe harbor contemplated in Section 28(e) of the Securities Exchange Act of 1934, as amended.

Such research, systems and processes are not a function of order routing decisions or commissions being paid for transactions, but are platform benefits provided by custodians to their institutional customers such as us. These benefits may not be allocated equally among all of our Clients or their Accounts. We may also receive services, which can include investment profiles, sales literature, advertising and other materials. Our platform custodians may also provide education and financial support at our conferences designed to educate our IARs on the services available to support our clients.

Products and services beyond trade execution that broker-dealers commonly make available to advisors as an integral part of their institutional trading and custody platforms. These products and services may be proprietary to the brokerage firm or provided by third parties. They typically include pricing and other market data, research, software and software discounts available to correspondents of the institutional trading and custody platforms. Such software may not, however, be for administrative and reporting purposes. Although often made available on an unsolicited basis and not tied to the amount of trading the IAR does or the commissions its clients pay, the availability of these services and particularly the extent to which the IAR uses them should be disclosed as appropriate in discussing factors the advisor considers in selecting or suggesting brokers and determining the reasonableness of their commissions.

TRANSITION ASSISTANCE BENEFITS

IFP provides various benefits and payments to IARs that are new to the IFP platform to assist the IAR with the costs (including foregone revenues during account transition) associated with transitioning his or her business to the IFP platform. The proceeds of such Transition Assistance payments are intended to be used for a variety of purposes, including but not necessarily limited to, providing working capital to assist in funding the IAR's business, satisfying any outstanding debt owed to the IAR's prior firm, offsetting certain fees payable to IFP as a result of the IAR's transition to IFP's platform, technology set-up fees, marketing and mailing costs, licensure fees, moving expenses, office space expenses and staffing support.

The amount of the Transition Assistance payments can be significant in relation to the overall revenue earned or compensation received by the IAR at his/her prior firm. Such payments are generally based on the size of the IAR's business established at his/her prior firm and/or assets under management on the IFP platform. This creates a conflict of interest as IARs will choose to do business with IFP over other firms.

Additionally, Clearing Firms/Custodians, etc. will provide IFP and/or IAR with additional revenue or expense reimbursement to aid in the transfer costs associated with moving from another firm to IFP or from one Clearing Firm, Custodian to another within the IFP platforms.¹⁵ In most cases, this additional compensation is passed on to the IAR who, in turn, uses it to assist with expenses or to reimburse Client's for costs incurred during the transfer. This creates a conflict of interest because of the benefit received by IFP or the IAR.

IFP endeavors to act in your best interest. IFP's recommendation that you maintain your assets in accounts at certain broker-dealers or custodians can be based in part on the benefit to IFP of the availability of some of the foregoing products and services and not solely on the nature, cost or quality of custody and brokerage services provided by such broker-dealers. This creates a conflict of interest as other broker-dealer or custodians will be less expensive to you. You are under no obligation to act on our recommendations.

BEST EXECUTION

IFP takes its responsibility for Best Execution seriously. Which is why IFP does not believe that best execution necessarily means the lowest available price. Instead, the totality of the arrangement and services provided by a broker-dealer must be examined to determine best execution. Accordingly, while IFP does consider competitive rates, it does not necessarily obtain the lowest possible commission rates for your account transactions. Therefore, the overall services provided by IFP and all of the unaffiliated broker-dealers and custodians are evaluated to determine best execution.

We do not receive any compensation or incentive for referring you to certain broker-dealers for brokerage trades. We will arrange for the execution of securities brokerage transactions through broker-dealers that we reasonably believe will provide best execution. IFP does not handle orders as such, but places orders with its various custodians, and they handle and route such orders in pursuit of best execution. In seeking best execution, the determinative factor is not the lowest possible commission cost, although that is clearly an important factor, but the holistic analysis of best execution entails evaluating whether the transaction represents the best qualitative execution, taking into consideration the full range of a broker-dealer's services and the Client's needs and objectives, including the value of research provided, execution capability, execution speed, commission rates and responsiveness.

- <https://www.fidelity.com/trading/execution-quality/overview>

- <https://seic.com/help-clients/sei-investments-distribution-co-rule-605-and-606-reports>

As a general policy, IFP does not accept client instruction to use a broker/dealer other than the clearing platforms we use, and part of the reason is that Best Execution may be sacrificed. Operational and reporting efficiency is another reason. In any event, if IFP were to accept “direct brokerage” orders, then we may not be able to obtain the most favorable costs or execution, and you may pay higher fees or transaction costs. You may also lose any benefits that we have been able to obtain for our other clients such as volume discounts, order aggregation or block trades. If you direct us to use a particular broker-dealer, you will have the sole responsibility for negotiating the commission rate and other

¹⁵ Pershing is our sole clearing firm for our affiliated broker/dealer, which serves as our custodian for broker/dealer-only accounts, but also serves as the Qualified Custodian for investment advisory accounts of IFP. Pershing pays IFP, without regard to whether the accounts are brokerage or investment advisory accounts, 7.5 basis point for assets transferred to Pershing.

IFP's custodians generally pay IFP client account fees for closing accounts at other custodian in order to open accounts at IFP's custodians.

IFP understand such transition benefits are not unusual in the industry, and exist among with top clearing/custodian platforms in the US, but IFP is, nevertheless, disclosing such payments as a conflict-of-interest that incentivizes account transfer. That being said, the customer and the IAR are not obligated to transfer accounts as an IAR leaves one firm and joins IFP, and neither is the customer obligated to rollover assets from one firm to IFP simply because an IAR joins IFP.

transaction costs with the broker-dealer and/or custodian.

When an account is being managed by a TPAM, IFP is not able to change the costs of execution charged by the custodian that holds the account or the quality of the execution services provided by the clearing firm used by the TPAM. You should address concerns or questions regarding the costs or quality of execution services to the clearing firm which holds the account, or the TPAM who manages the account. You should consider that, when an account is being managed by a TPAM, that you could pay higher commissions or trade execution charges through them than through other broker/dealers and/or custodians.

TRADE ERRORS

On occasion, an error will be made in your account. For example, a security is erroneously purchased in your account instead of being sold. In these occasions, IFP seeks to correct the error by placing your account as it would have been had there been no error.

Depending on the circumstances, corrective steps will be taken, including but not limited to, cancelling the trade, adjusting an allocation, and/or crediting your account. When the correction of a trade error results in a loss, IFP works with the relevant custodian your account whole. In the event a trading error results in a profit, the profit is retained by IFP.

CONFLICTS OF INTEREST

In addition to other disclosures about conflicts-of-interest in this document, IFP offers the following disclosure about the types of conflicts between IFP, your IAR and you:

- When our personnel serve in the capacity as a RR or an insurance agent, FPs have a conflict of interest when they solicit, offer and sell securities and insurance products for which you would pay a commission, while also soliciting, offering and selling investment advisory services and managing the assets in your accounts and charging a separate investment advisory fee. IFP addresses this conflict of interest by requiring the FP to disclose to you at the time a brokerage account is opened through IFP Securities, LLC the nature of the transaction or relationship, his or her role as an IFP Securities RR, and any compensation including commissions that are paid by you and/or received by the FP. Moreover, our FPs, beyond mere disclosure, should disclose and support why each securities purchase and portfolio allocation is In your Best Interest, and if our FPs are collecting an asset under management (AUM) fee for providing investment advisory/management services, they, absent compelling justification, not also charge a commission because such a dual compensation structure is not generally considered as in the Best Interest of the Client. It is your responsibility to promptly notify us if there is a change in your financial situation or investment objectives. You are not obligated to use IFP for securities transactions or individual insurance provider products.
- Account Rollover recommendations presents a conflict of interest because IARs have an economic incentive to recommend you to rollover your retirement plan into an IFP advisory program account.
- You are under no obligation to engage the services of a professional recommended by IFP. You retain discretion over implementation decisions and will accept or reject recommendation from IFP or its FP.
- Some of our IAR engage in referring clients of IFP to other service providers such as accountants. Fees not allowed to be shared, unless *bona fide* solicitor Agreement in place. In these cases, a conflict of interest exists if the IAR is receiving any fees as a solicitor or there is a tacit expectation or understanding that the other service provider should refer client to IAR in exchange for a referral to such other service providers. IFP policy disallows such “tied” or “tacit” agreements.
- Securities and insurance products sold in exchange for a commission also have conflicts of interest when the product sold has a higher commission or fee than another product (e.g., private placement and variable annuities have higher fees than other registered securities products. Some indexed or market-linked fixed annuities may also have relatively higher fees).
- Because IFP’s advisory fees and those of the other TPAMs within the firm’s advisory program are based on assets under management, IFP and those TPAMs have a conflict of interest in valuing securities held in Client accounts since a higher valuation produces higher advisory fees. To ensure that Client assets are accurately

valued, for purposes of calculating fees, securities listed on any national securities exchange shall be valued, as of the valuation date, at the closing price on the principal exchange on which they are traded. Any other securities or investments shall be valued in a manner determined in good faith to reflect fair market value. Any such valuation should not be considered a guarantee of any kind whatsoever with respect to the value of the assets. Our custodians, in their sole discretion, may use the services of an independent valuation agent, as well as other independent sources with respect to the computation of market value of securities. The data contained in those reports has not been verified by IFP.

- When we provide you with a recommendation as your investment adviser or as your broker-dealer, we must act in your best interest and not put our interest ahead of yours. At the same time, the way we make money creates some conflicts with your interests. You should understand and ask us about these conflicts because they can affect the recommendations and investment advice you receive.
- An example of a conflict, as noted above, is that IFP Advisors, LLC and IFP Securities, LLC are under common ownership. Your FP may suggest that you implement investment advice by purchasing securities products through a commission based IFP Securities, LLC account. If you choose to purchase these products through IFP Securities, LLC., IFP and your FP will receive a commission based on the specific product purchased. A conflict will exist between the interests of IFP, your FP and your interests because your FP will earn compensation for each arrangement. A commission for the commission-based account an advisory fee for managed account and a fee for financial planning services when applicable.
- You are free to implement investment advice through any broker-dealer or product sponsor you chose. However, you should understand that, if you authorize our IAR to engage in securities transactions on your behalf, your IAR must place all purchases and sales of securities products through IFP Securities, LLC or other IFP approved institutions.
- Not only do you want to know how much you will pay in fees, but you should also understand how your IAR is incentivized. Your IAR has an incentive in the fee charged to you as they receive a percentage of the fee with the remaining amount of the fee retained by IFP.
- IFP receives an incentive based upon the number of accounts opened with Pershing, which could impact the recommendation to open an HSA account, and could impact the likelihood, when opening an HSA account, to use Pershing rather than another custodian.
- An IAR will either earn a commission for recommending a product or service if they are acting in a broker capacity or they may earn a fee in the form of a one-time fee or an ongoing fee if they are acting in an advisory capacity. Depending on your facts and circumstances, either or both are appropriate. In addition, IFP and your IAR can receive additional compensation from third-party firms. If you are interested in learning more, please review IFP's Revenue Sharing Disclosure here or at <https://ifpartners.com/wp-content/uploads/2020/06/Revenue-Sharing-Disclosure-May-2020.pdf>.
- IFP's program to provide Forgivable Notes to transfer their business to IFP present a conflict of interest as it incentivizes IAR's to maintain your relationship with IFP for the duration of the Note and/or to choose IFP over another firm.

Our IARs are compensated based on:

- the amount of client assets they service;
- product sales commissions; and/or
- the time and complexity required to meet a client's needs;
- revenue the firm earns from the IAR's advisory services or recommendations;
- the product sold (e.g., differential compensation, where 1 product pays more than another product).

Revenue sharing is a form of a conflict of interest. IFP has entered into various arrangements with some companies where revenue sharing occurs. Although IFP endeavors at all times to put the interest of its clients ahead of its own or those of its officers, directors, or representatives ("affiliated persons"), these arrangements could affect the judgment of IFP or its IARs when recommending investment products. Because these situations present a conflict of interest that may affect the judgment of our financial professionals, IFP believes it is important that you are aware of our revenue sharing arrangements when you and your financial professionals evaluate your investment options.

IFP has established revenue sharing arrangements with a select group of companies that offer a broad spectrum of products. These Companies participate in activities that are designed to help facilitate the distribution of their products. Companies participating will have greater access to our financial professionals through marketing activities, training, and other educational presentations so that our financial professionals can better serve their clients.

These payments can originate from the company's distributor, its investment adviser, and/or other related entities. Certain Companies will make this payment from investment assets, while others will not. While the revenue sharing arrangements with each company will vary, IFP typically receives a flat fee, payment based on sales, or payment based on assets under management. Such fees oftentimes are structured as due diligence fees and other product provider revenue streams, non-cash compensation/event-sponsorship and account transfer expense reimbursement. Based upon its review, IFP has concluded that no such revenue sharing runs afoul of the Soft Dollar Safe Harbor or applicable regulations governing non-cash compensation. Nevertheless, they broadly fall into the category of conflicts of interest.

ITEM 13. REVIEW OF ACCOUNTS

IARs are responsible for providing investment advice and conducting ongoing reviews for your respective accounts. Therefore, you will need to contact your IAR for the most current information and status of your account(s).

Managed account reviews are provided on an ongoing basis, typically based on a schedule agreed upon by you and your IAR. IFP does not impose a specific review schedule that IARs must follow. IAR are expected to review their accounts annually, and as frequently as quarterly. Beyond the timing of such periodic reviews, IARs are expected to review accounts that has experienced significant declines in order to reevaluate whether or not the account and investment strategy is still current and appropriate in light of recent market and issuer/securities or issuer-specific events. However, more frequent reviews can be provided to an account depending on, among other issues, changes to your financial situation and/or personal situation or changes in market conditions. For this reason, it is important that you understand your responsibility to inform your IAR promptly of any changes to your information or circumstances, including changes to your financial condition or investment objectives.

In situations where IAR recommended TPAMs to you, and serve as a co-advisor rather than a solicitor, they are responsible for monitoring their firm and account activity. You may also request your IAR monitoring such accounts on an ongoing basis according to certain schedules and according to certain criteria or concerns that you have.

Financial planning reviews are performed upon a request from you. For financial planning and consultancy services that are ongoing in nature, and not merely related to preparing and delivering a single financial plan, IFP recommends that you have any ongoing your financial planning services reviewed annually or upon changes that affect your goals, objectives, or financial situation. Additional fees can be charged for this review.

If you contract for ongoing consultation services, we suggest you request a review annually to determine if your objectives are being met. Your IAR can perform reviews more frequently at your request, or if you notify your IAR about a change that would trigger a review, such as a marriage, new job, etc.

In addition to the IAR review, IFP has a Transaction Supervision Team consisting of Registered Principals who review customer transactions on a daily basis according to a risk-based approach. Various products are also reviewed prior to submission to the respective advisory platforms (e.g., via Schwab/TD, Pershing, Fidelity and SEI). Such products subject to pre-clearance include variable annuities and private placements.

You will receive statements directly from account custodians monthly if there is activity in the account and quarterly if there is no activity in the account. Some platforms include quarterly performance reporting that is delivered by the custodian. If requested, IARs will prepare performance reports for you. IFP urges you to review the contents of the custodial statements and compare them against the reports provided directly from IAR. Accounts managed by other money managers send you reports (refer to their ADVII/Brochure for a description of their services).

ITEM 14. CLIENT REFERRALS AND OTHER COMPENSATION

CLIENT REFERRALS

IFP has individuals who are not affiliated with IFP introduce prospective clients to IFP. The individuals (called Solicitors) are paid a fee that is based on the advisory fee that you pay. If you were introduced to IFP through a Solicitor, IFP, through its IARs, will provide you with a separate written disclosure statement indicating that a referral fee is being paid to an individual who is unaffiliated with IFP. You will also receive a copy of IFP's solicitor disclosure brochure. The solicitor fee is paid from the total advisory fee, whereby a portion of the fee is shared with the solicitor and IFP retains a portion of the fee. Such an approach does not result in additional charges to you.

In limited circumstances, typically related to a former IAR of IFP who leaves IFP, IFP may enter into a revenue sharing arrangement with the former IFP IAR and/or their employer that is a registered investment adviser. Such arrangements in relation to accounts that the IAR solicited to IFP. This creates a conflict of interest as IFP is sharing compensation with a non-affiliated IAR of IFP. In such circumstances, the total fee that you pay for your account should not be increased, but may be split among various companies/individuals.

Some IARs offer advisory services by referring you to outside, or unaffiliated, asset managers that are registered or exempt from registration as investment advisers. TPAMs are responsible for monitoring client accounts and making trades in client accounts when necessary.

IFP and its IARs have the availability to offer investment advisory services on the premises of unaffiliated financial institutions, such as banks or credit unions. IFP has entered into agreements with the financial institutions and IFP will share compensation, including a portion of the investment advisory fee, with the financial institution for the use of the financial institution's facilities and for client referrals.

IFP and its IARs have the choice to offer advisory services on the premises of unaffiliated businesses, including insurance companies, employee benefit companies, and financial institutions such as banks or credit unions. IARs has the choice pay such business entity a flat fee (e.g., a rental or lease fee) for the use of the premises and for administrative support. IARs may also be employees of such financial institutions, which may pay the IARs a salary and/or an amount of variable compensation. IFP has entered into agreements with financial institutions pursuant to which IFP shares will share a portion of the investment advisory fees with the financial institution for the use of the financial institution's facilities and for client referrals that the financial institution and/or the IAR provides to IFP.

OTHER COMPENSATION

Some IARs will solicit, offer and sell securities and/or insurance products to you for commissions in their separate capacities as RRs of IFP Securities or acting as independent insurance agents for IFP Insurance Group, IFP's affiliated insurance agency. This represents a conflict of interest since IFP and the IAR receive fees and/or commissions if you choose to implement the recommendations of your IAR in his or her separate capacity as a RR of IFP Securities and/or as an insurance agent of IFP's affiliated insurance agency. In situations where your IAR is associated with an insurance agency unaffiliated with IFP, then the conflict of interest is solely between your IAR and you, and does not involve IFP as an enterprise. In all cases, however, you are under no obligation to implement recommendations through IFP or your IAR and are free to choose any broker/dealer or insurance company you wish to implement non-discretionary investment advisory recommendations.

Certain TPAMs, product sponsors or brokerage and/or Custodians will provide IFP or your IAR with economic benefits as a result of their total sales of investment products, but not based upon the volume of sales in in particular product or type of product. Your purchase of investments or insurance products, including sponsorship of meetings, marketing support, an entertainment, educational meetings, training events, industry conferences and reimbursement of non-lavish travel expenses. Any such events must be for educational purposes and the location of the event must have a reasonable nexus to the offeror. IFP review proposals for such events as part of its supervisory policies and procedures for reasonableness and for compliance with applicable industry standards, rules and regulations, but, nonetheless, IFP is

disclosing such matters because they have a bearing on compensation and what is known as “non-cash compensation”, and because they represent a conflict of interest.

In some instances, IARs will receive additional compensation for utilizing a document “Edelivery” systems, which provides efficiency to the provider.

Although IFP is able to negotiate competitive pricing from Pershing that it believes is beneficial to you, IFP’s clearing relationship with Pershing provides IFP with certain economic benefits by using IFP Securities as the broker-dealer for its advisory program accounts rather than an unaffiliated broker-dealer. For example, as previously described, IFP adds a “markup” to the transaction costs and “marks up” certain other brokerage-related account charges and fees that are assessed to client advisory accounts at Pershing. The charges and fees that are marked up include, but are not limited to, paper delivery surcharge fees for client statements and confirmations, clearance and execution fees, outgoing account transfer fees, mandatory reorganization fees, checking account fees, inactive account fees, wire fees, legal transfers fees, bond redemption fees, termination fees, and IRA annual custodial maintenance fees.

As disclosed above in Item 12, Brokerage Practices, in the subsection entitled “Transition Assistance Benefits”, some IARs receive transition benefits. Those benefits are paid by IFP, and some of them may be partially subsidized by the Qualified Custodians (e.g., covering account closing fees at other firms).

IFP also offers some IARs “Forgivable Notes”, although considering the particular high payout that IFP affords its IARs, such transition benefits are limited and perhaps smaller than firms with lower pay-outs to their IARs.

In any event, the Forgivable Note is a combined amount, used to defray costs of IARs joining IFP. This assistance can include, but is not limited to, technology services, administrative support, marketing costs or reimbursement of fees associated with moving accounts. The Forgivable Notes present a conflict of interest as it incentivizes IAR’s to maintain your relationship with IFP for the duration of the Note and/or to choose IFP over another firm.

Some IARs are received a one-time grant of IFP Group, LLC private stock. IFP Group is the holding company for IFP and IFP Securities. IARs who received this private stock do not act as officers of IFP. However, they would have a percentage of ownership and have the ability to participate in IFP’s overall profits. IARs are also eligible to participate in grant program due to their affiliation as Registered Representatives of IFP Securities, LLC. and/or IARs for IFP. This arrangement between certain IARs and IFP is a conflict of interest in that it can incentivize decisions to be made in the interest of the firm versus the interest of the client.

Bank account referrals. IFP, thru Its IARs, refer clients to Sofi for bank account services (<https://www.sofi.com/>). Both IFP and the IAR receive compensation for this referral. This creates a conflict as your IAR has an incentive to recommend the use of the Sofi rather than another bank account that might better fit your needs. You are under no obligation to use Sofi and can choose another bank account for your use.

ITEM 15. CUSTODY

Neither IFP nor IAR hold or maintain actual custody of your assets. Third-party Qualified Custodians hold and maintain your assets, and those custodians provide account statements directly to you at yours address of record at least quarterly. IFP urges you to compare the account statements you receive from the account custodian with any performance report or statements IFP, IFP service providers, or other reports that you IARs may create for you. You can contact your IAR with any questions, and if any discrepancies appear, you are encouraged to contact IFP’s Operations and/or Compliance Department, requesting to speak with a Principal/Supervisor.

Although IFP does not maintain physical custody of client accounts, IFP does have constructive custody over certain assets as defined under the Advisers Act. For example, some IARs act as a trustee for a trust account of a client or IAR or IFP will take possession of physical security certificates and forward them to your account custodian as an accommodation. As a result, IFP retains an independent audit from an accounting firm registered as a Public Company Accounting Oversight Board (“PCAOB”) to assess the controls over the custody of client assets. As of the date of this filing, our current auditing firm is Hacker, Johnson and Smith, PA, and their Web Site is <http://www.hackerjohnson.com/>.

ITEM 16. INVESTMENT DISCRETION

Upon receiving written authorization from you, IFP and its IARs have the ability to execute securities transactions on a discretionary basis. If you want your IAR to have the discretion to transaction business in your account without contacting you, then you must agree and authorize discretion as part of the investment advisory agreement signed by you. When discretionary authority is granted, it is limited to the type and amount of securities to be bought or sold, but not the broker or dealer used, nor the commission rates paid when executing transactions. IARs do not have access to your funds and/or securities with the exception of having advisory fees deducted by the account custodian from your account and paid to IFP.

If you authorize discretionary authority, transactions will be executed in your account discussing the transaction in advance and without any need of you to approve or clear that transaction. If you decide to limit trading authorization on a "non-discretionary basis," then your IAR will be required to contact you prior to implementing changes in your account. Therefore, you will be contacted and required to accept or reject your IAR's investment recommendations, including, but not limited to, security being recommended, the number of shares or units, whether to buy or sell. In that case, it is important that you promptly respond to these requests in order for your IAR to promptly execute transactions and/or implement strategic adjustments to your portfolio.

ITEM 17. VOTING CLIENT SECURITIES

IFP does not perform proxy voting services on your behalf. You are instructed to read through the information provided with the proxy voting documents and to decide based on the information provided. Upon request, IARs may provide limited clarifications of the issues presented in the proxy voting materials based on IARs understanding of issues presented in the proxy voting materials. However, you have the ultimate responsibility for making proxy voting decisions. Otherwise, TPAMs have their own policies regarding proxy voting. You are advised to review the policies of your TPAM to determine their proxy voting policy.

ITEM 18. FINANCIAL INFORMATION

IFP does not require or solicit prepayment of more than \$1,200 in investment advisory fees per client, six months or more in advance. Therefore, IFP is not required to include a balance sheet for its most recent fiscal year. IFP is not subject to a financial condition that is reasonably likely to impair its ability to meet contractual commitments to you, nor has IFP been the subject of a bankruptcy petition at any time.

PAYCHECK PROTECTION PROGRAM

The Coronavirus Aid, Relief, and Economic Security Act enacted March 27, 2020 ("CARES Act") provided multiple potential benefits to small businesses. One of the benefits provided was the Paycheck Protection Program ("PPP"). The intent of the program was to provide loans for qualifying small businesses to help cover their costs associated with payroll, benefits, interest, rent and leases, and utilities during the Coronavirus COVID-19 Pandemic. The PPP loan also provided loan forgiveness provisions based on a variety of factors.

In April of 2020, IFP Advisors LLC applied for and obtained a PPP loan in the amount of \$1,032,000. While not necessary for ongoing business operations, IFP's participation in the PPP was driven by the uncertainty of the then current economic conditions. IFP deposited PPP loan proceeds into its operating account and used the proceeds to cover eligible payroll costs. In June of 2021, under the PPP's loan forgiveness provisions, the balance of IFP's PPP loan was forgiven.

For more information on the Paycheck Protection Program, please visit <https://www.sba.gov/funding-programs/loans/covid-19-relief-options/paycheck-protection-program>.
